POS Cashier Exception Walkthrough

Parked sale cancellation and void approval

Local test result

Masu Cafe Indian Foodszt | Cashier teamoleblanc | Admin approval

POS: http://127.0.0.1:5182/ | OPIS: http://127.0.0.1:5181/

PARKED SALE

Sale #35 cancellation approved

VOID

NFS-000220 / PHP 90.00

APPROVAL

Approved workflow recorded in OPIS

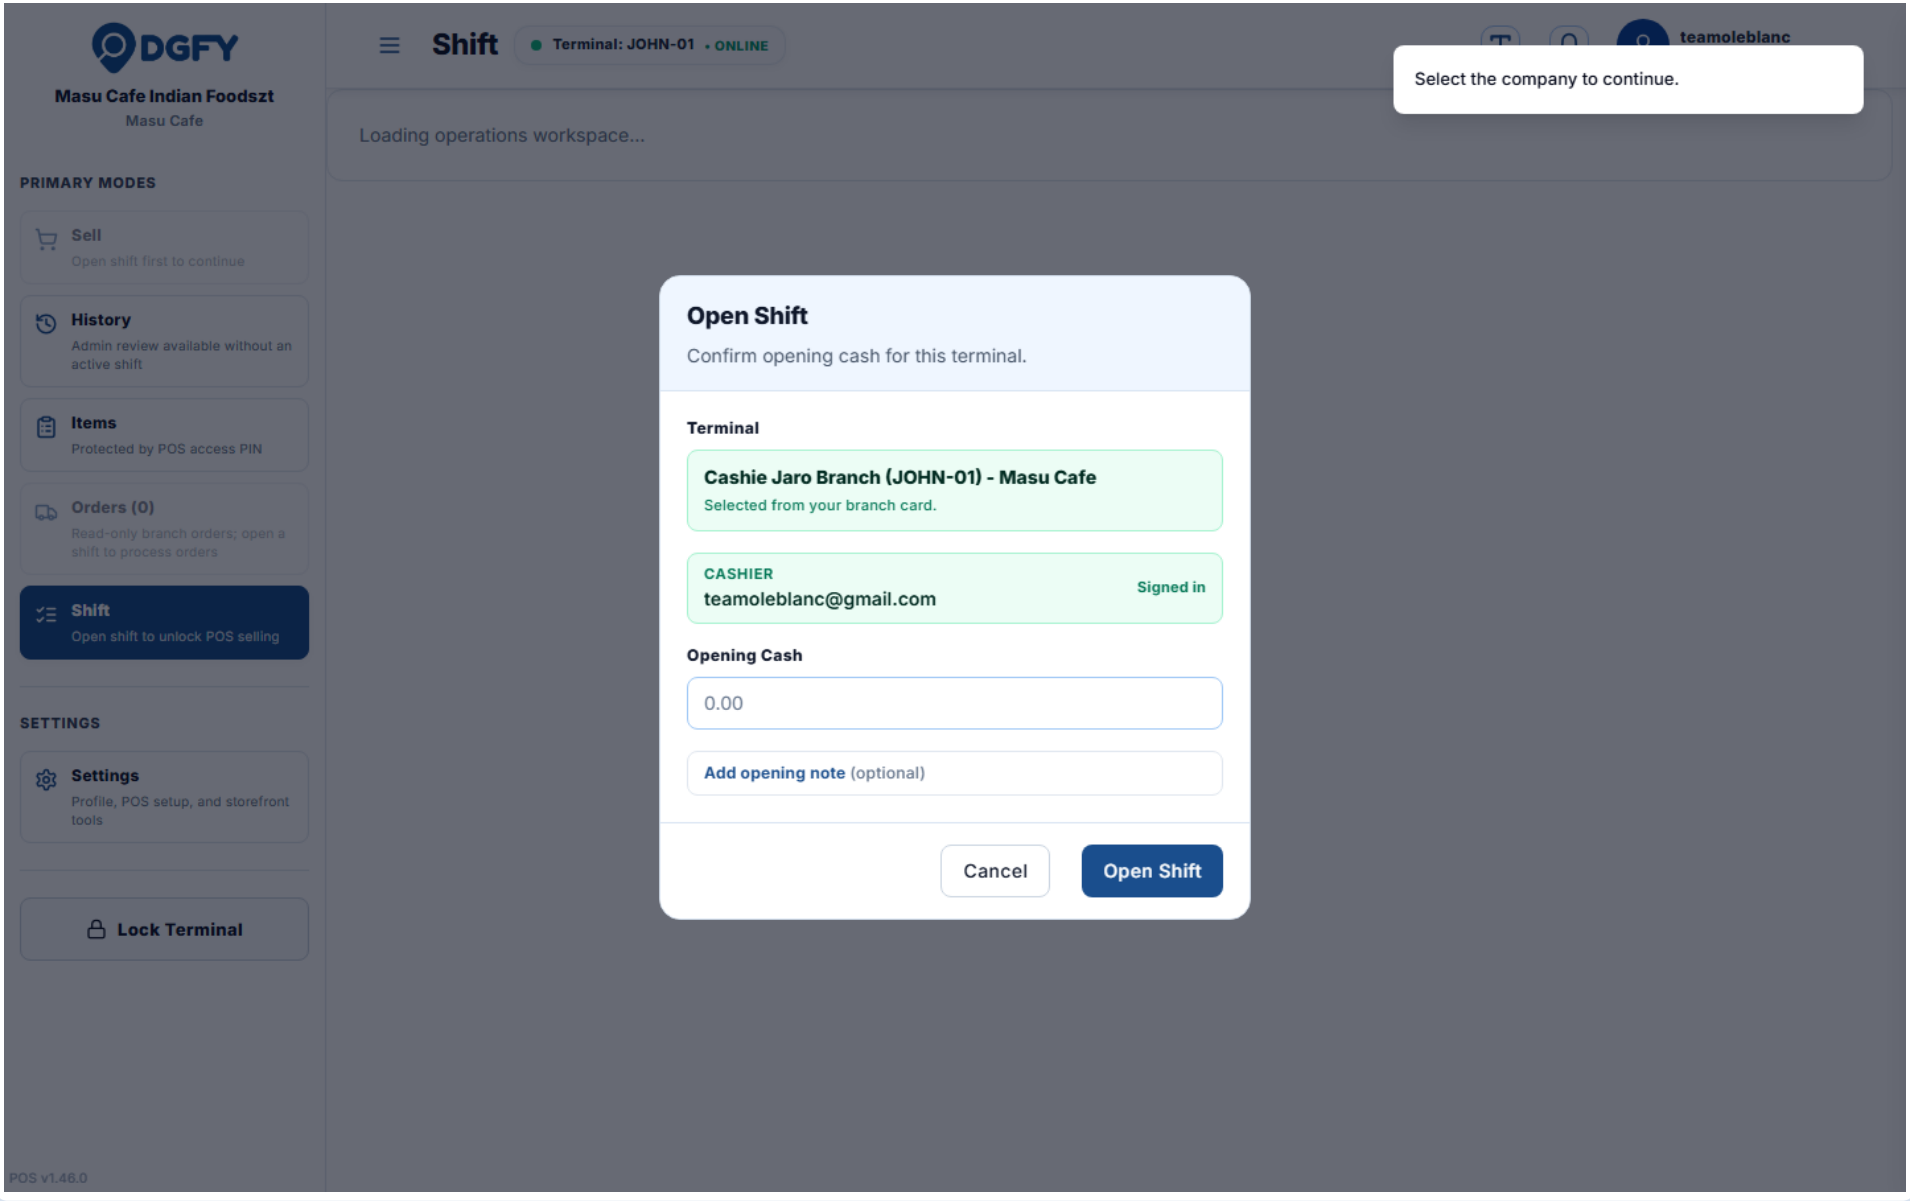

What was verified

- The cashier created a parked sale and submitted a cancellation request.
- The admin approved the parked-sale cancellation in OPIS Approvals.
- The cashier created a completed sale, then submitted a void for manager approval.
- The admin approved the void and OPIS recorded the approved workflow and amount.
- The local test shift was cleaned up with zero cash variance; a fresh cashier shift was opened.

Security note The visible cashier void dialog requires a separate 4 to 12 digit global POS PIN. The login password was not reused or changed. The manager-approval route was verified locally.

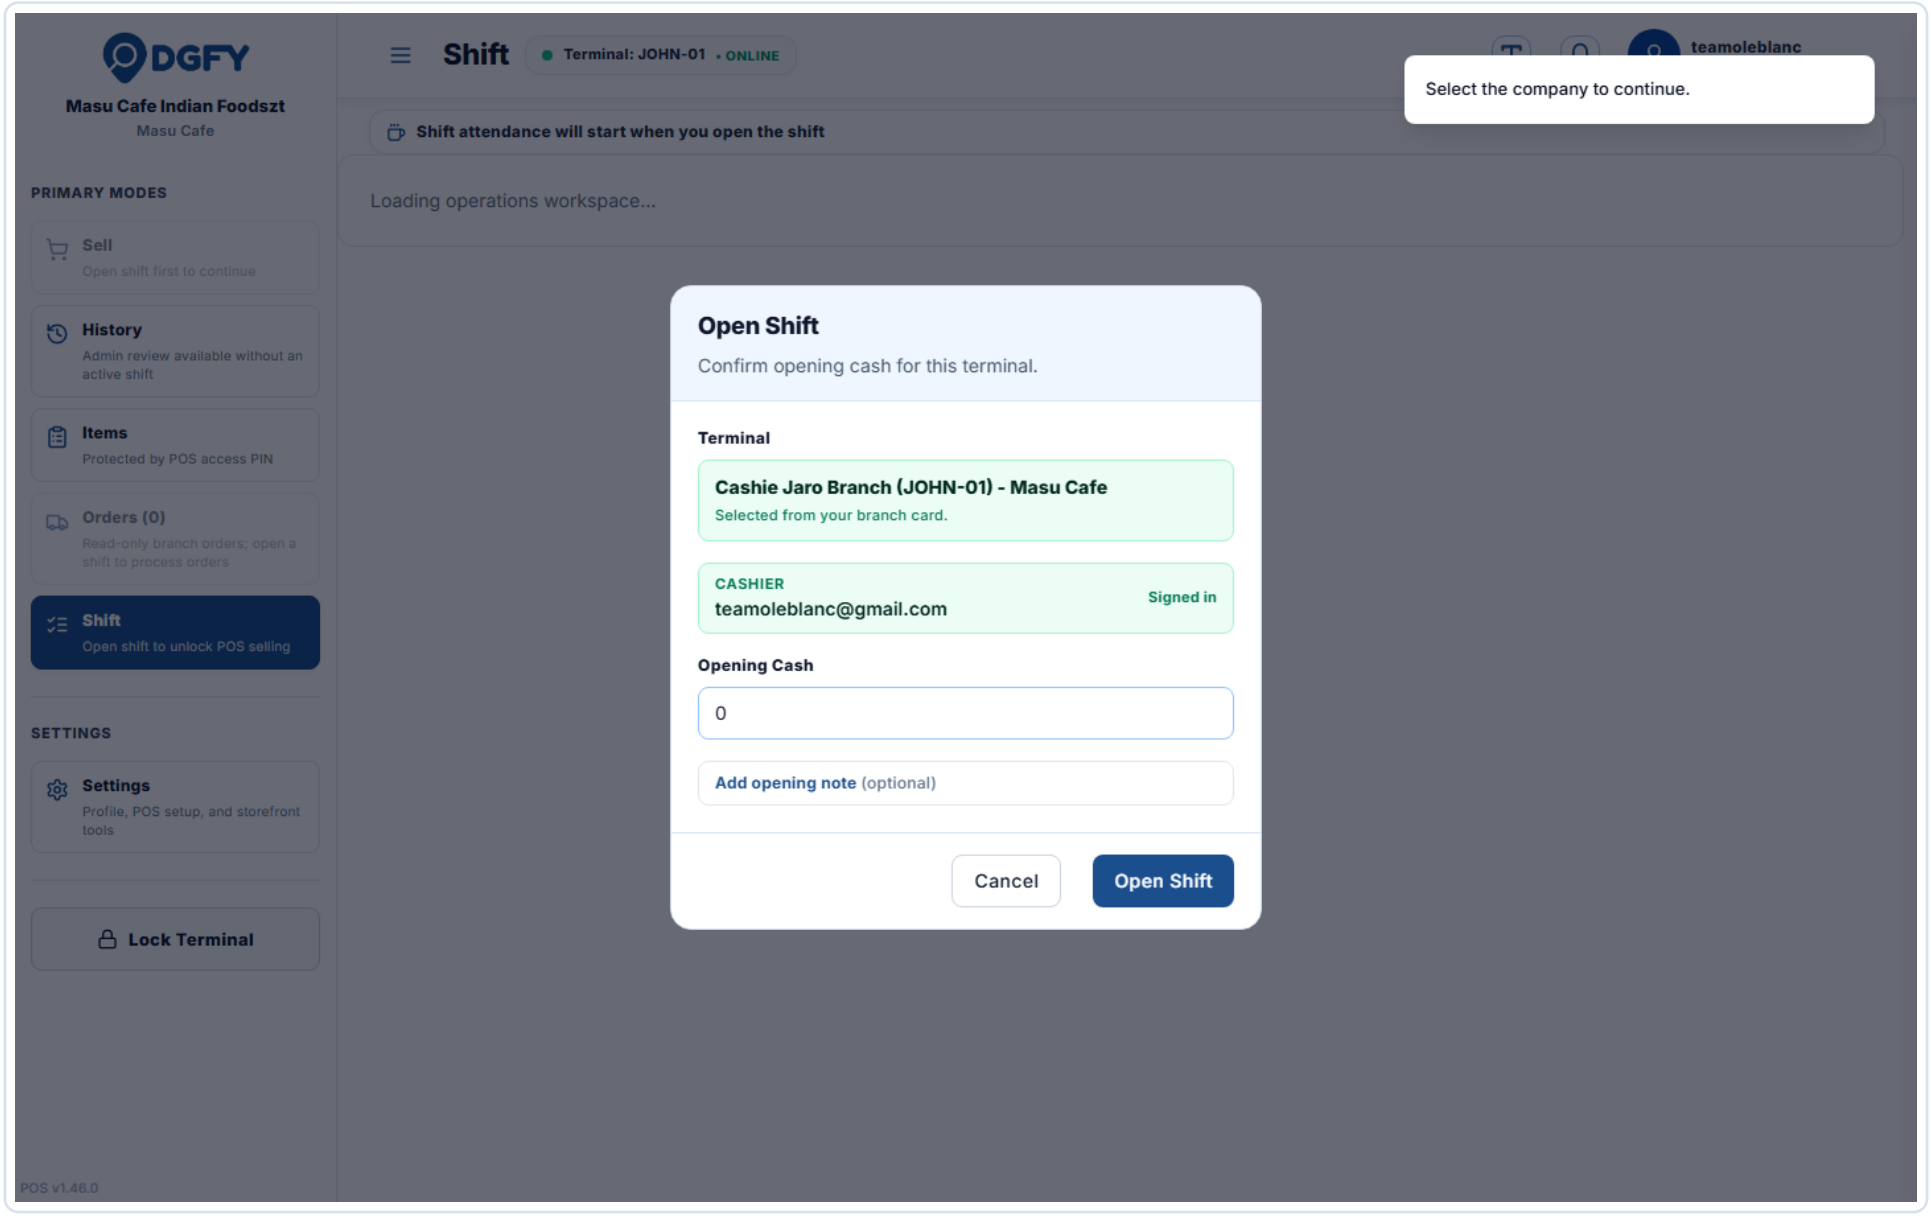

Step 1 - Cashier branch ready

The cashier account is signed in locally and the Masu Cafe branch is ready.

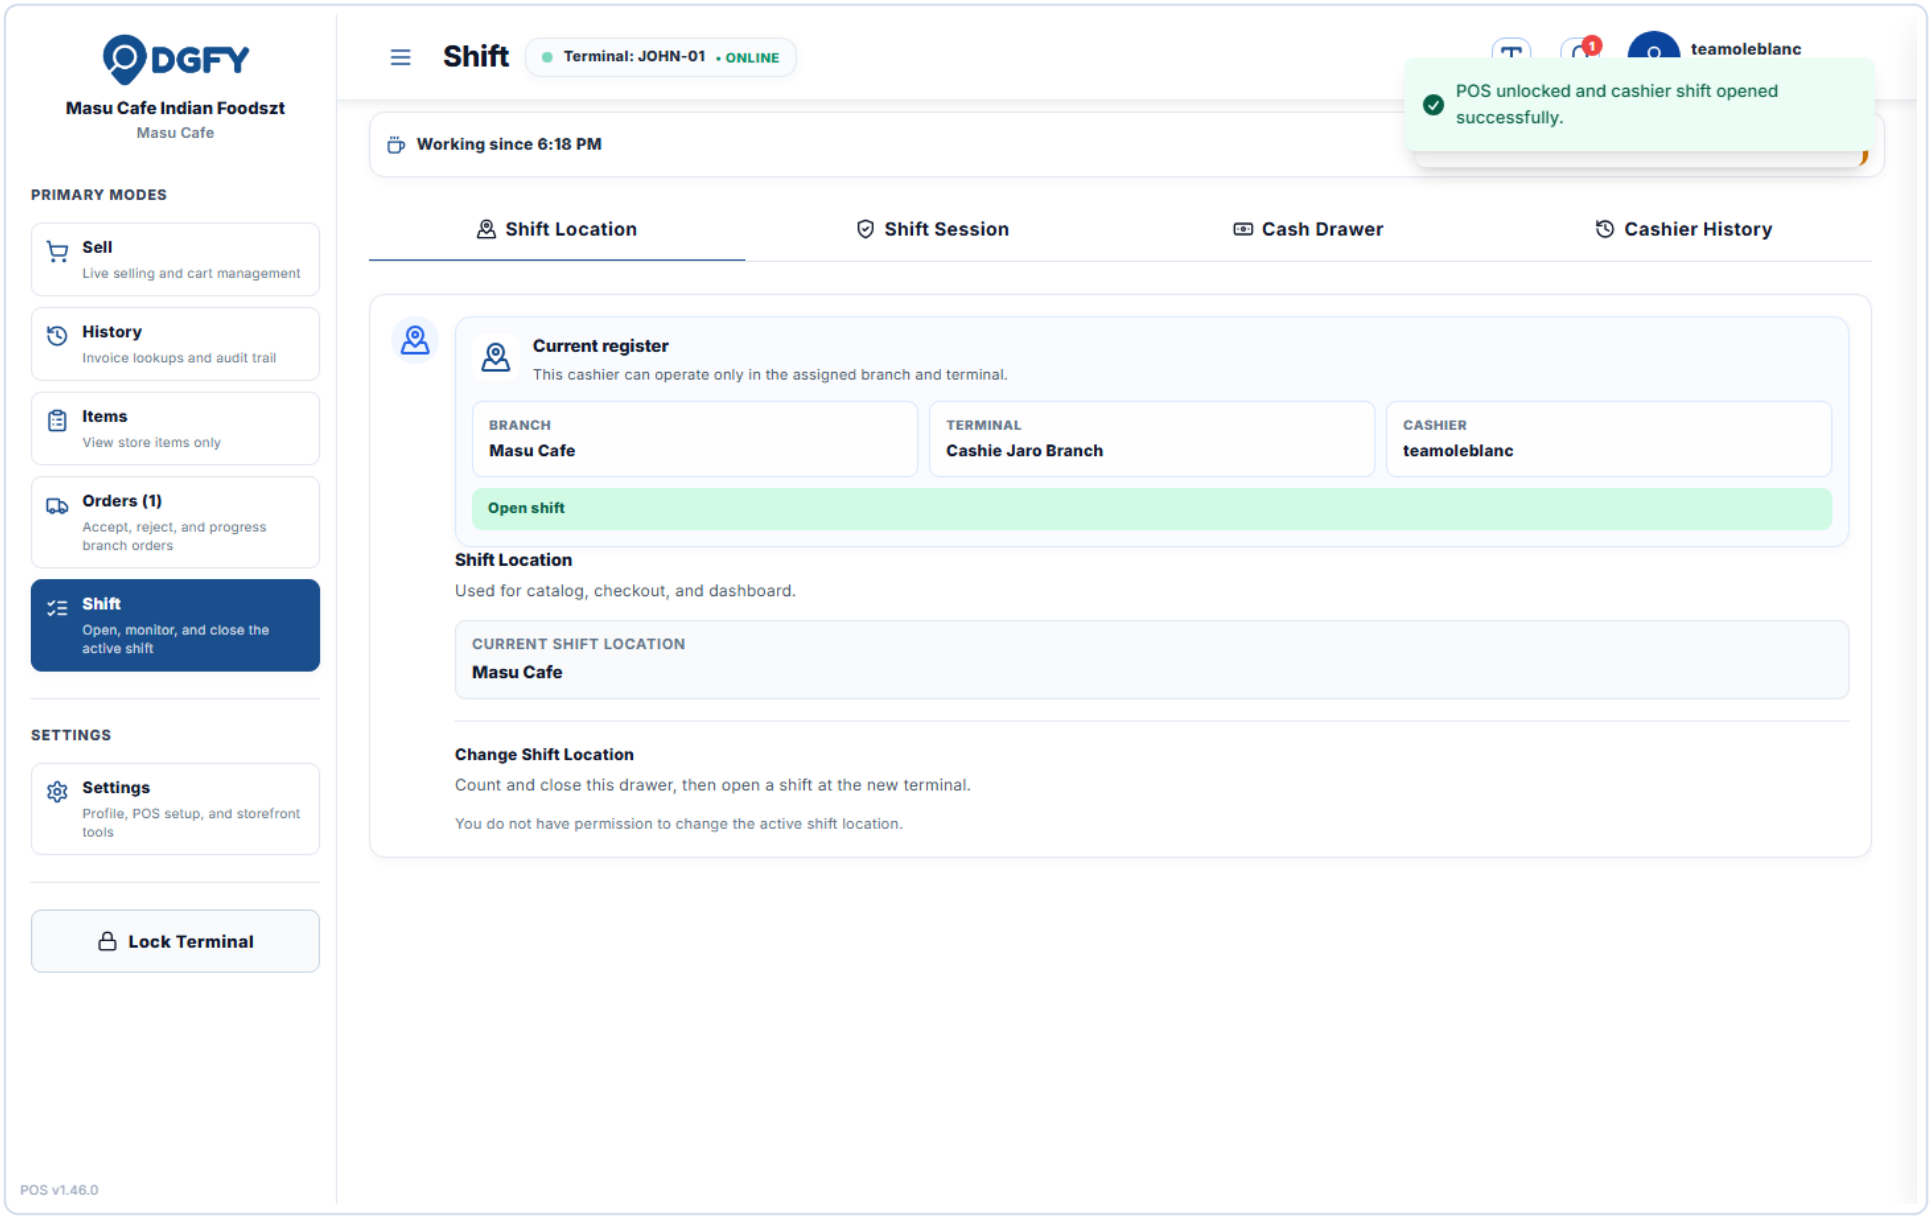

Step 2 - Open cashier shift

The cashier opens the local terminal shift before selling.

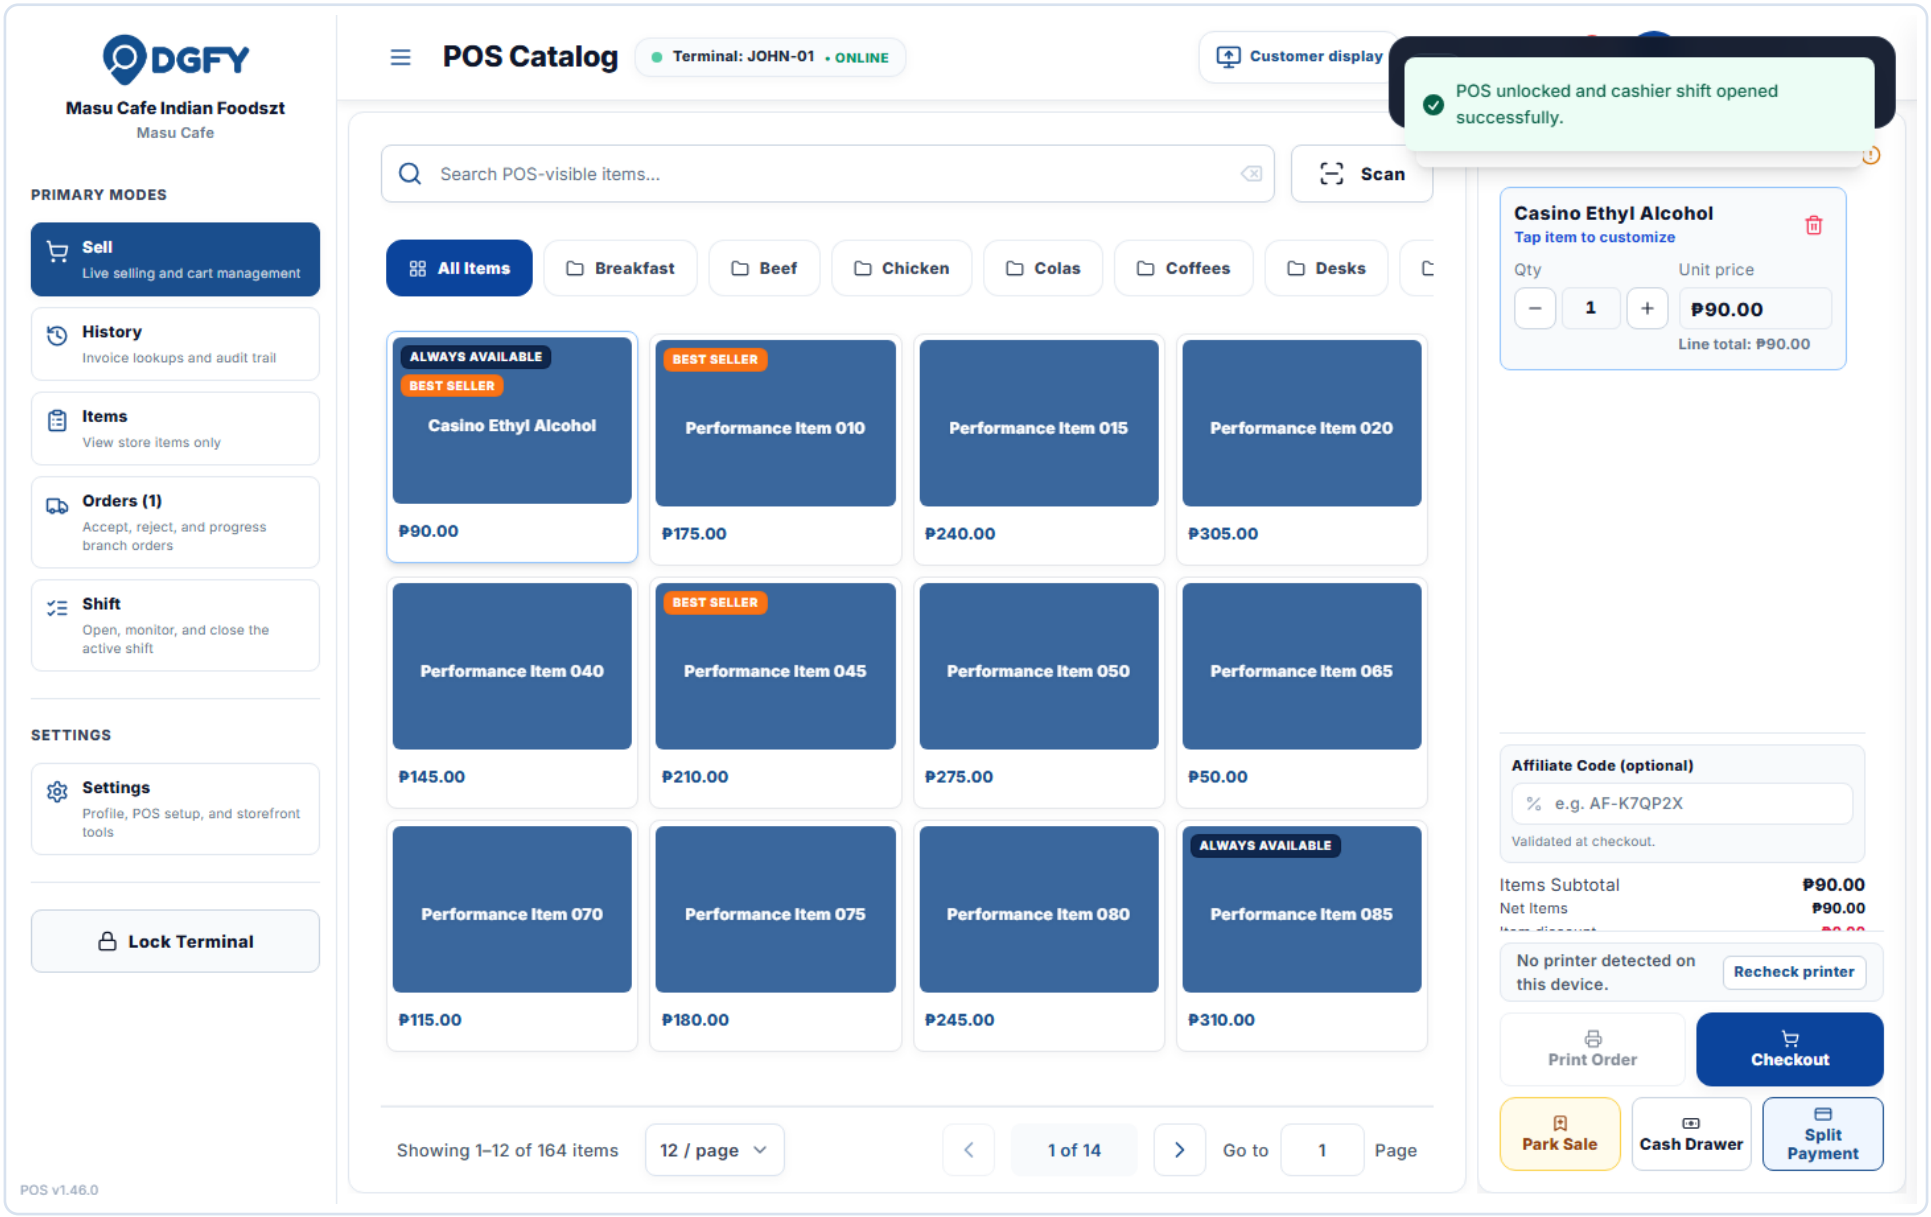

Step 3 - Shift open

The cashier shift is open on terminal JOHN-01.

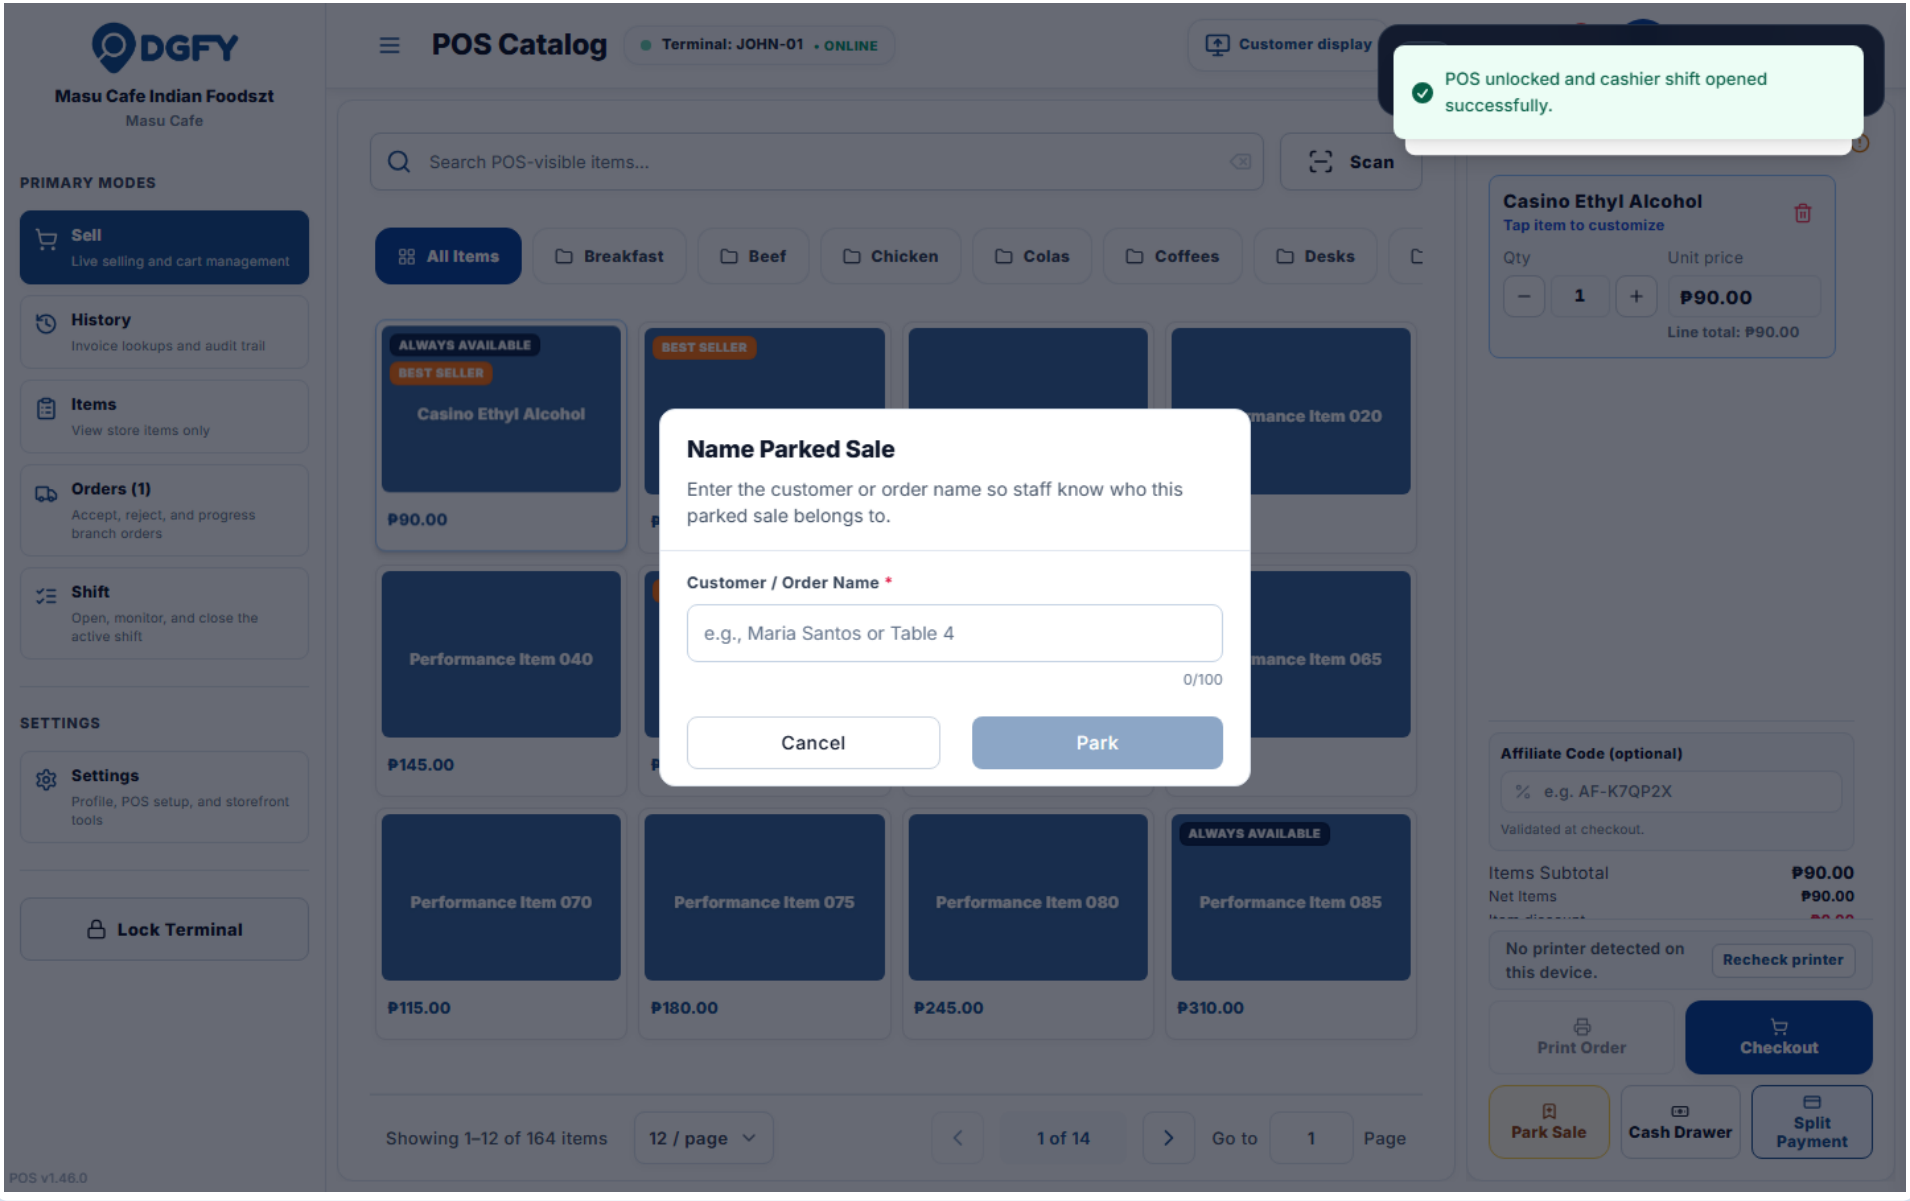

Step 4 - Sale prepared

An item is added to the current sale before parking it.

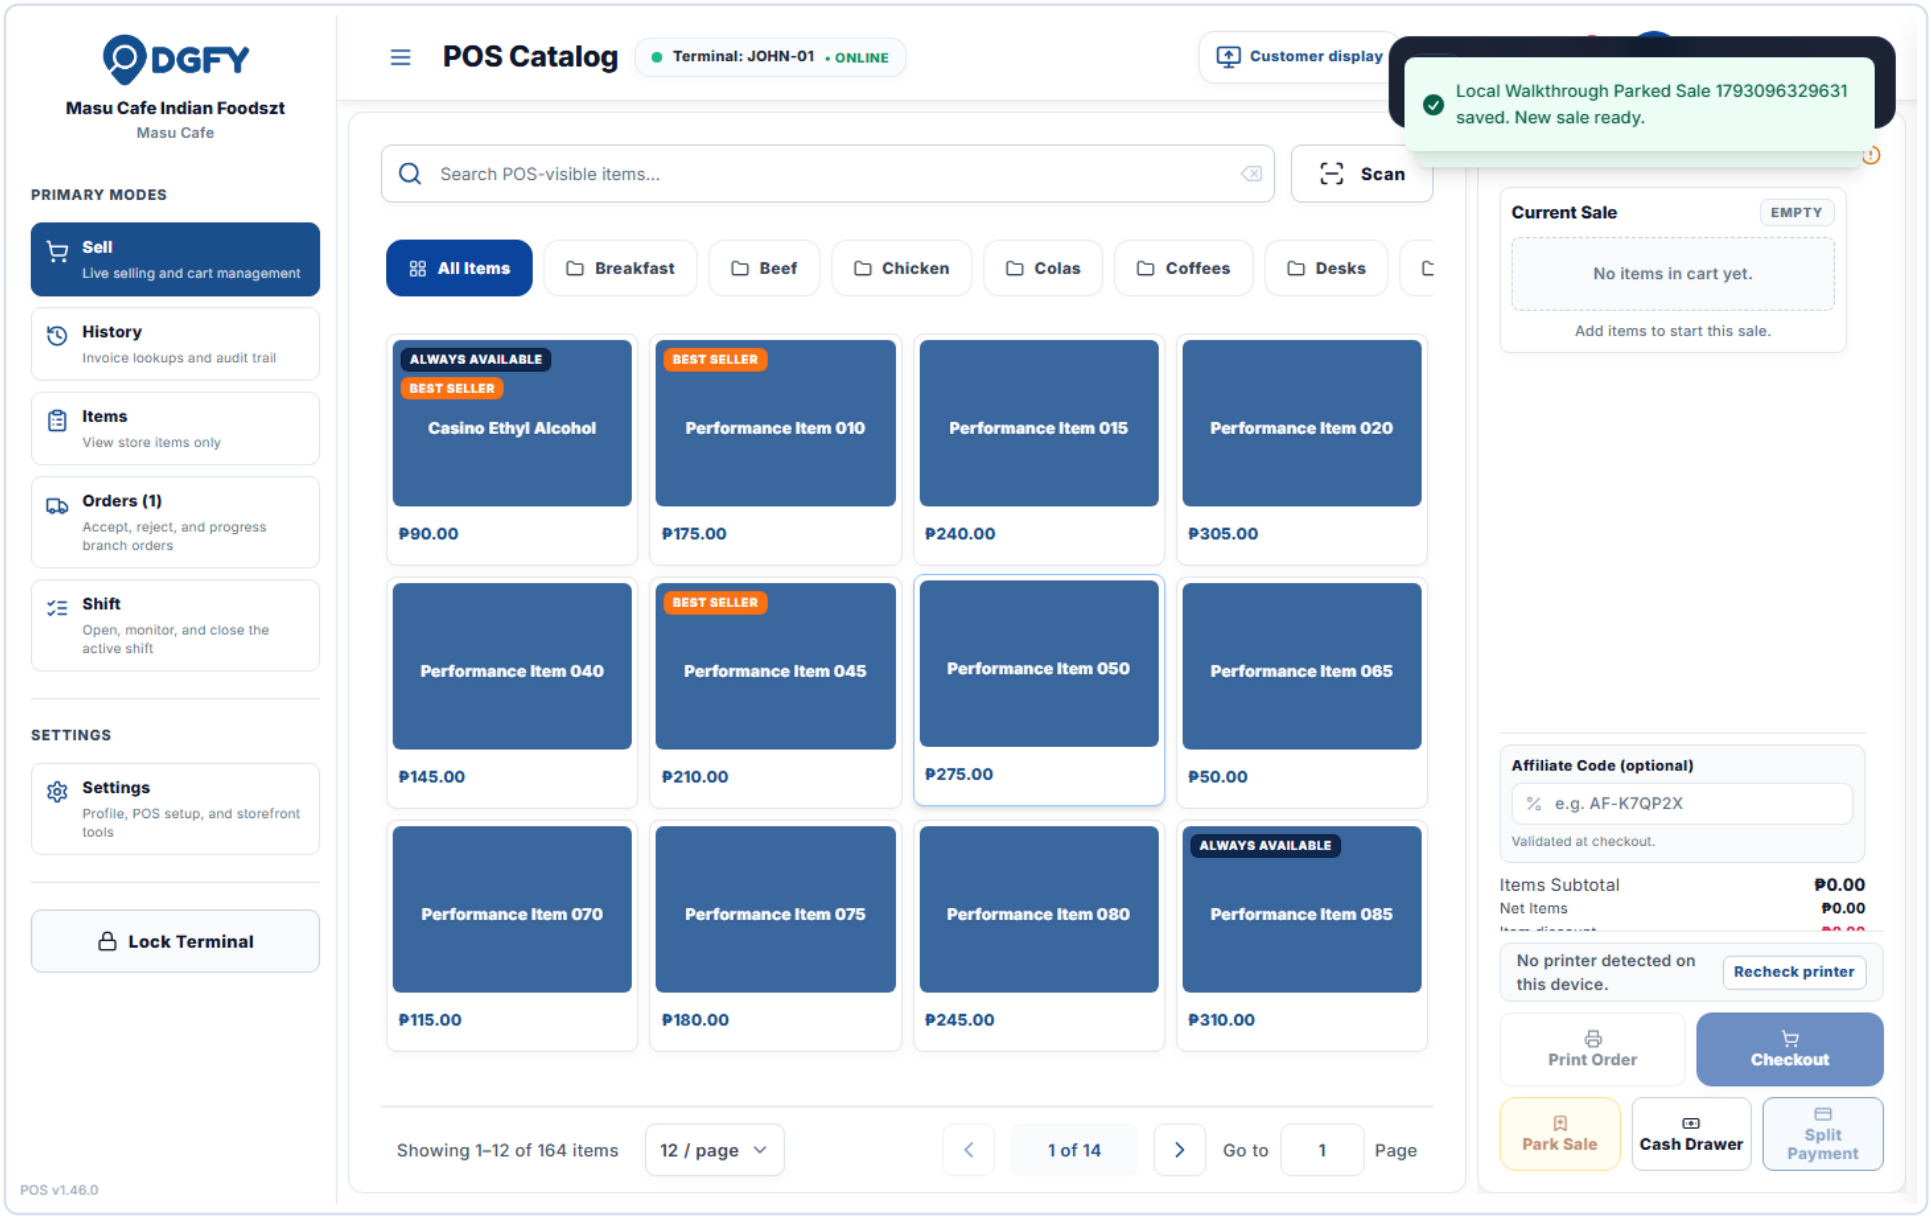

Step 5 - Name the parked sale

The cashier assigns a reference name to the parked sale.

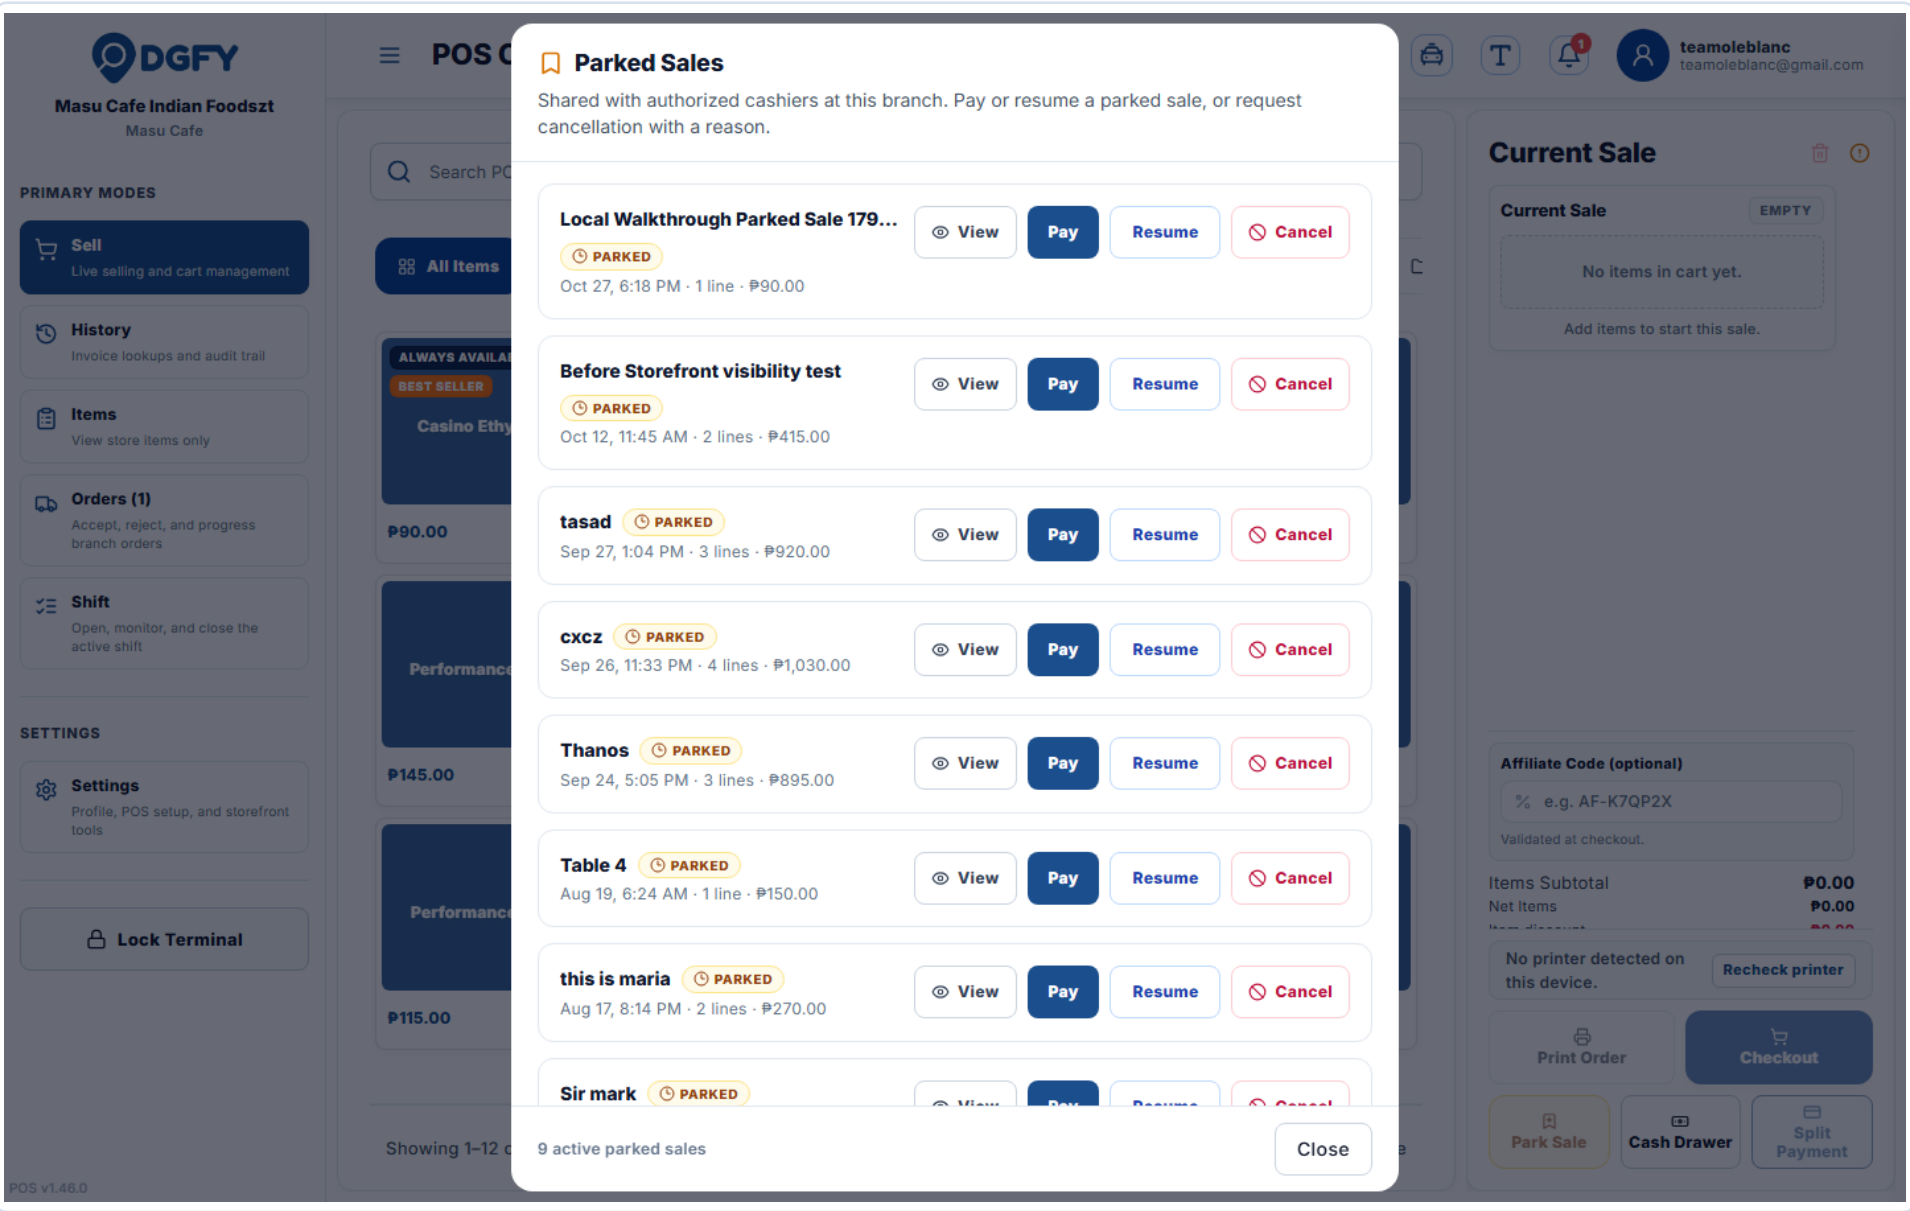

Step 6 - Parked sale created

The parked sale is saved and the current sale is cleared.

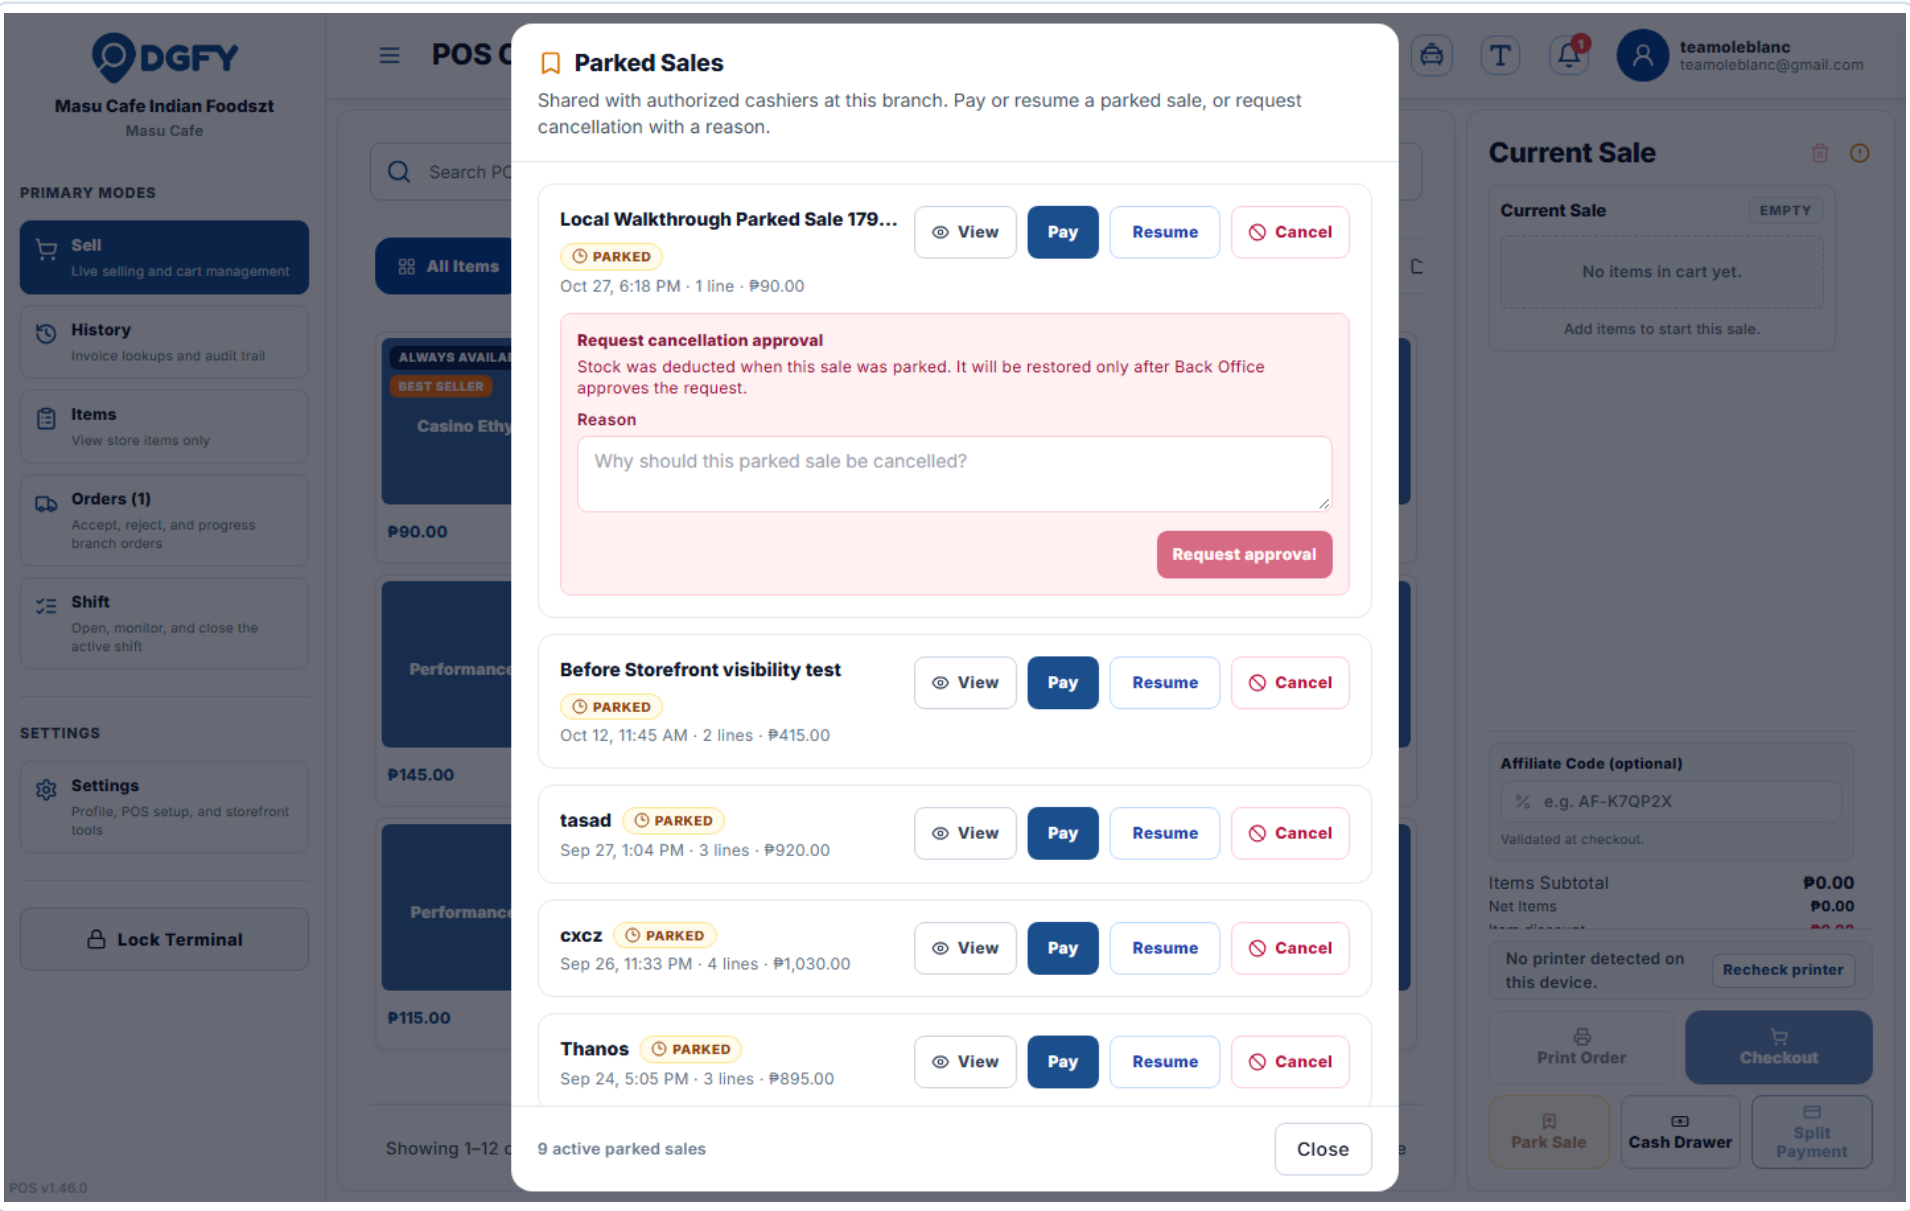

Step 7 - Parked-sale history

The cashier opens the parked-sales list and finds the new sale.

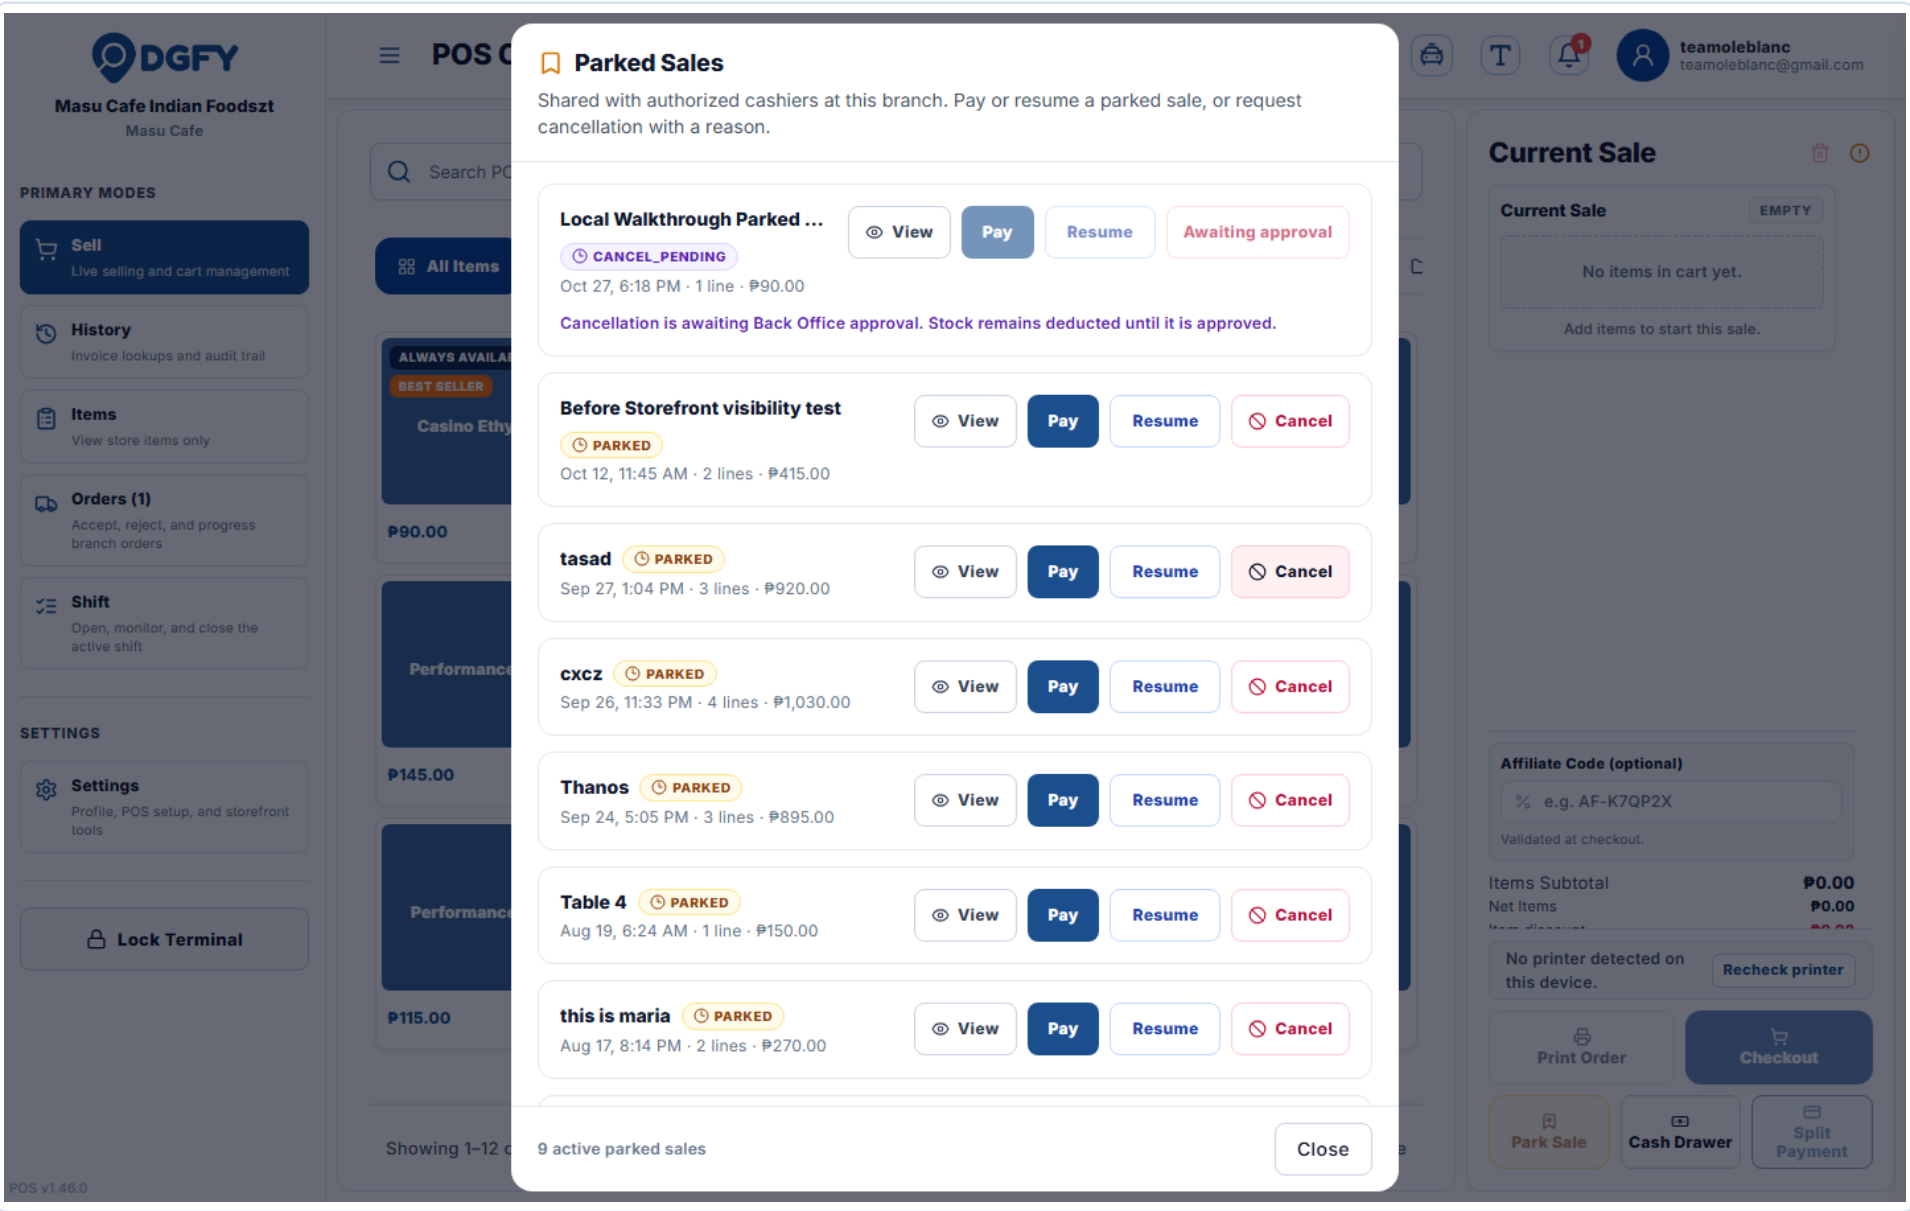

Step 8 - Request parked-sale cancellation

The cashier submits a cancellation reason for manager approval.

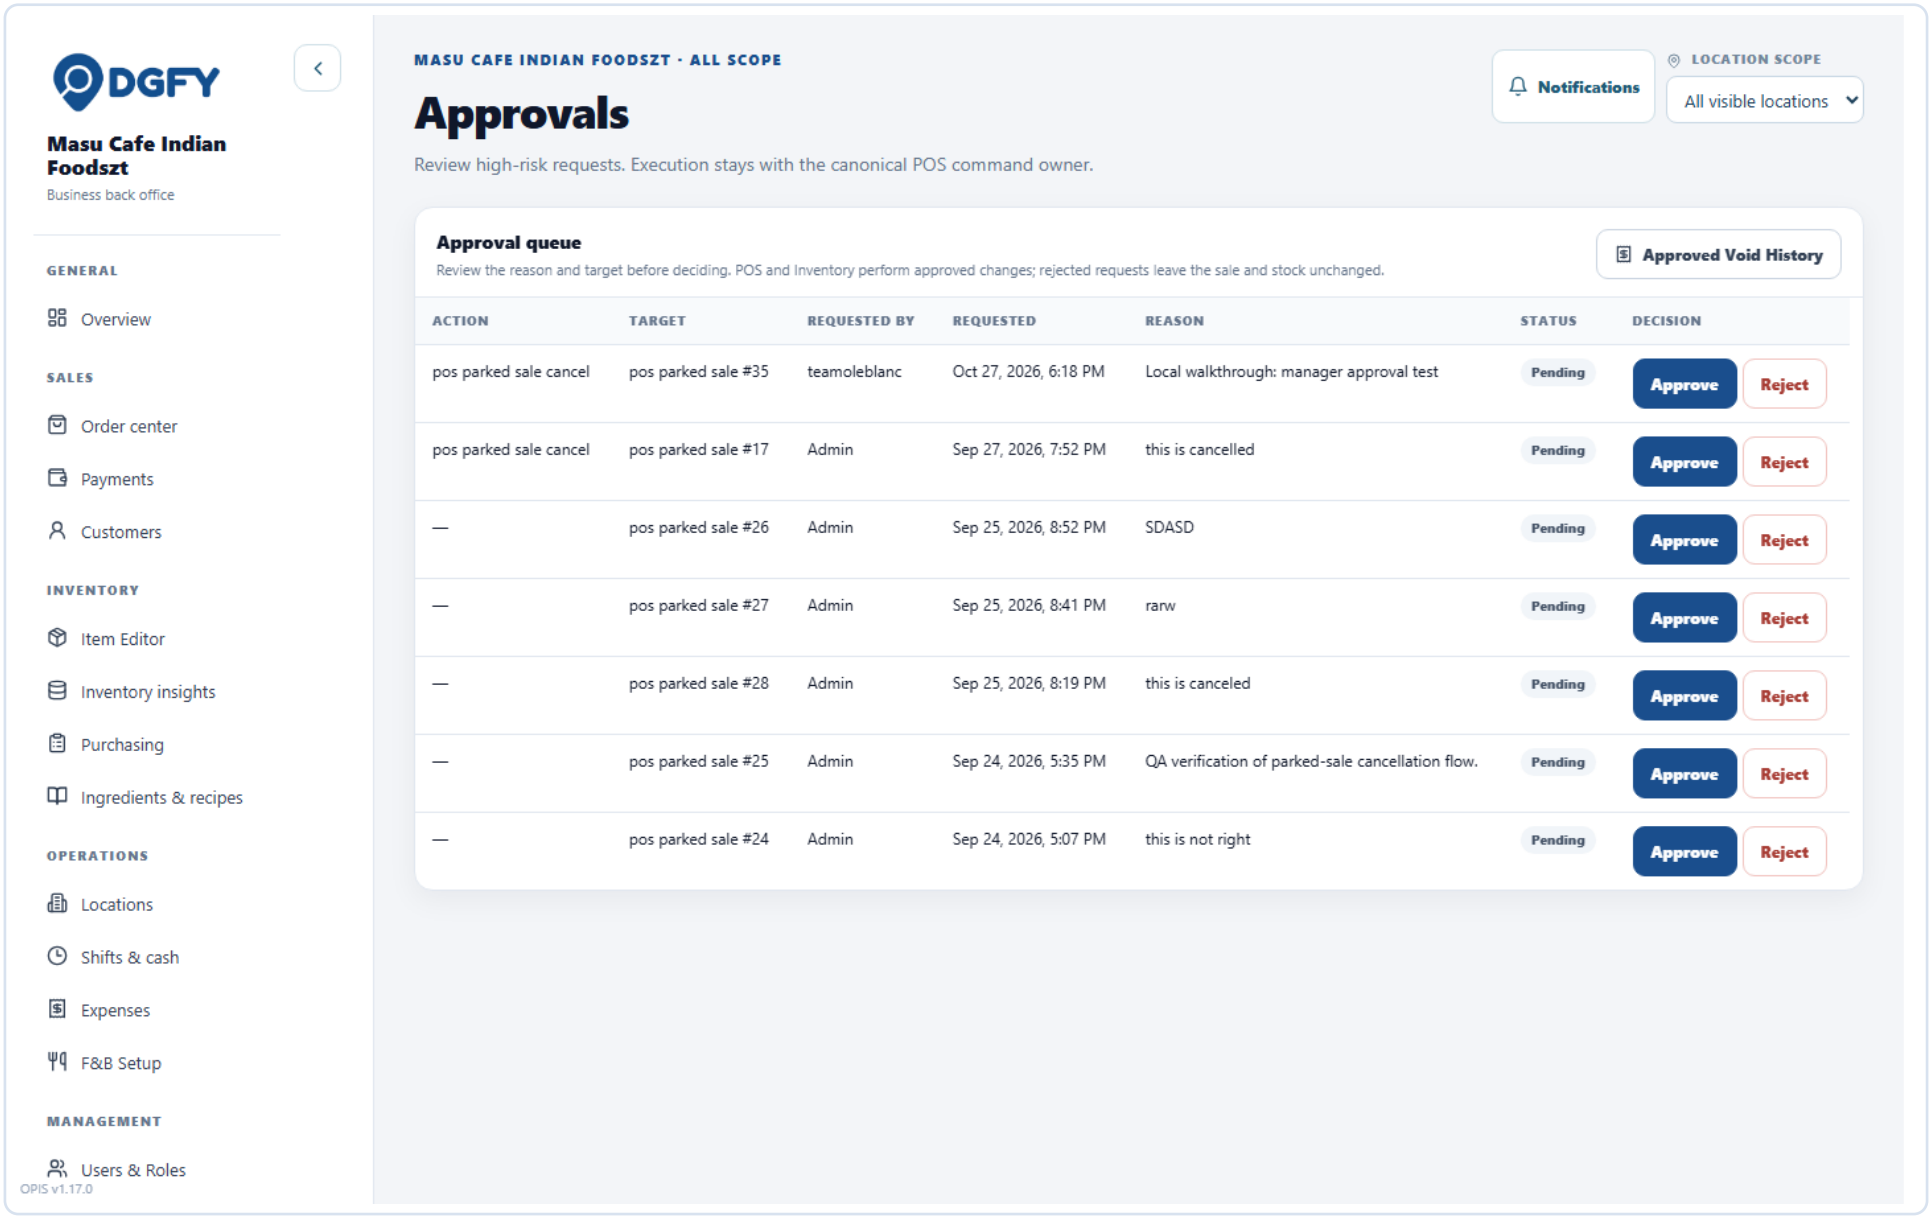

Step 9 - Awaiting approval

The parked sale is marked CANCEL_PENDING and remains protected until approval.

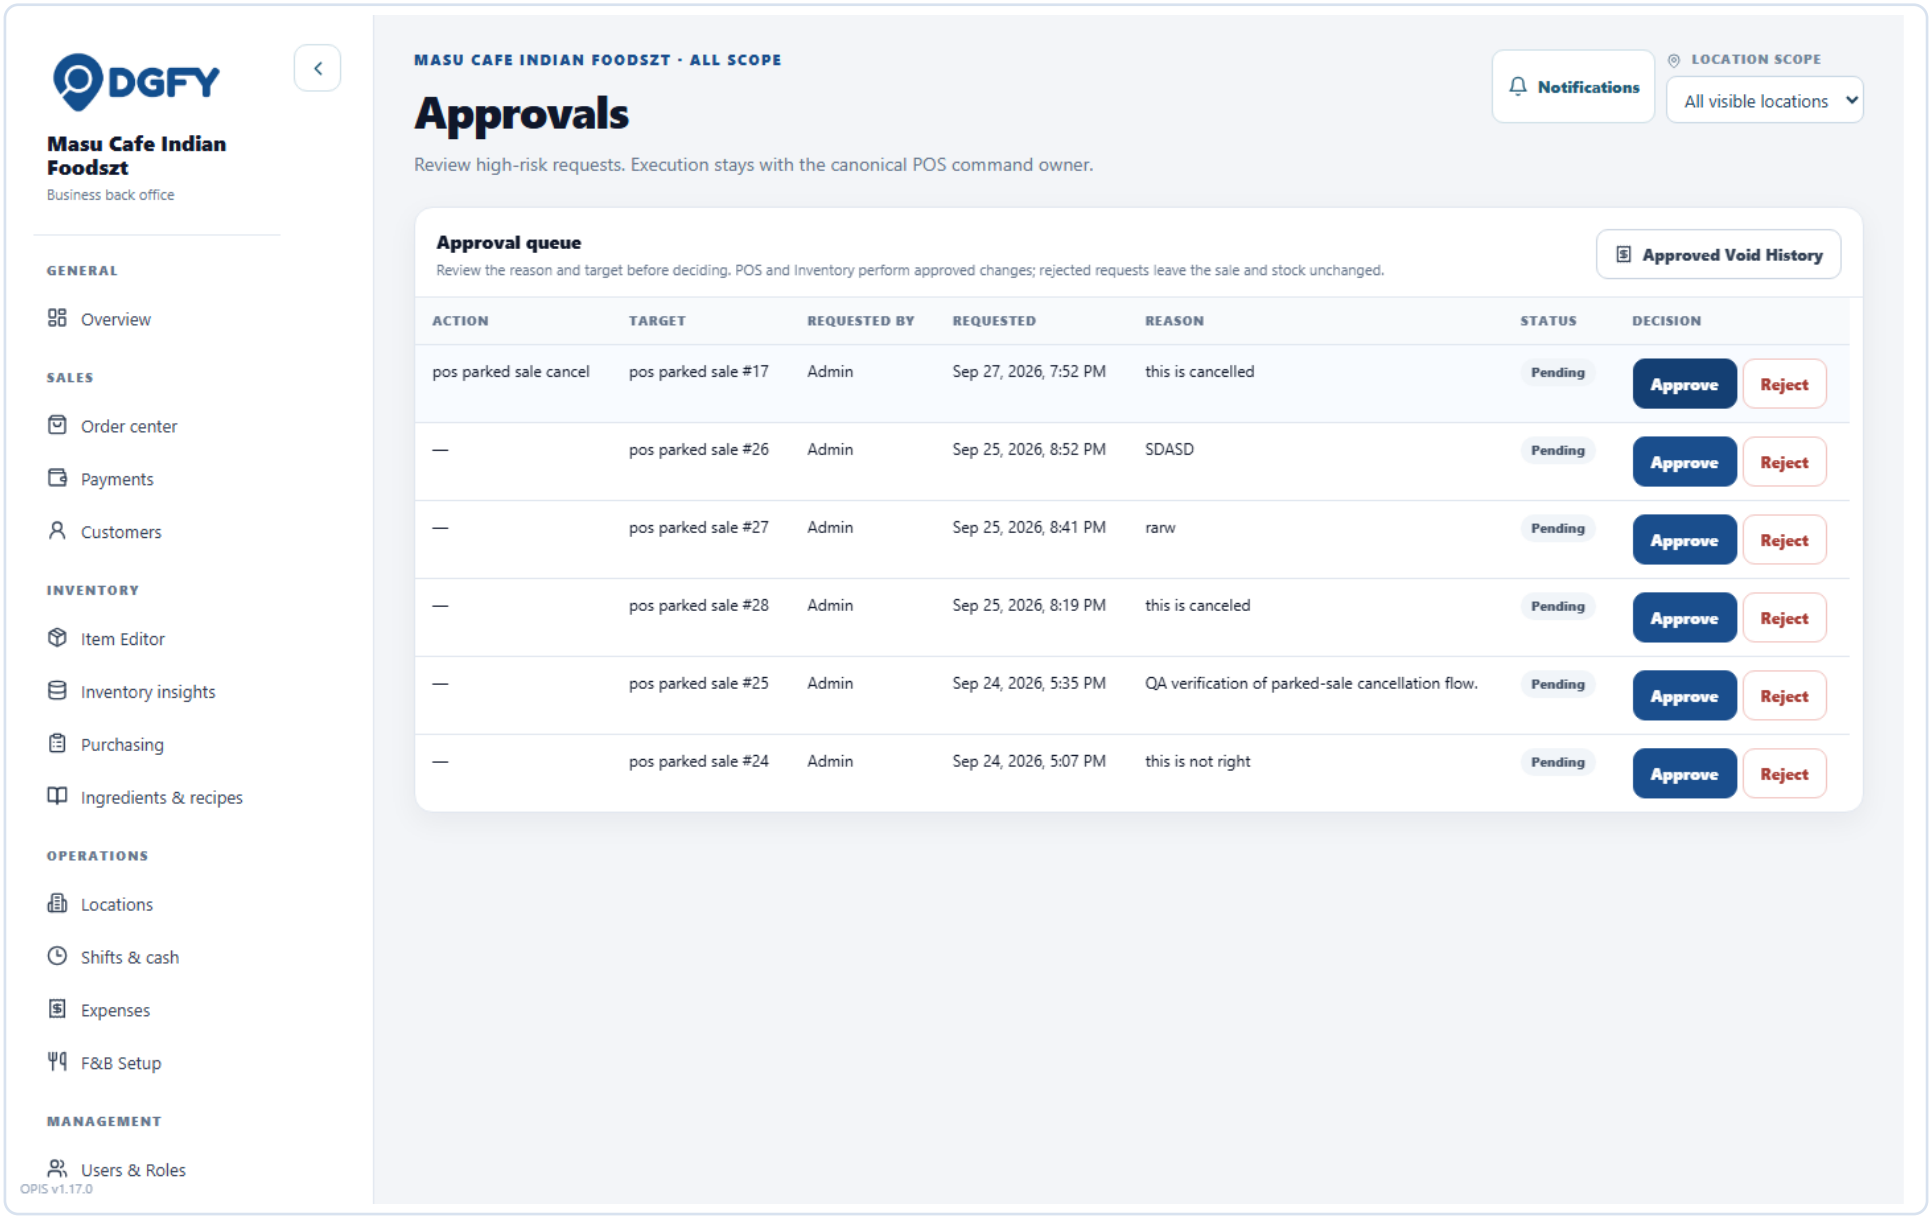

Step 10 - Admin parked-sale queue

The admin sees the parked-sale cancellation request in OPIS Approvals.

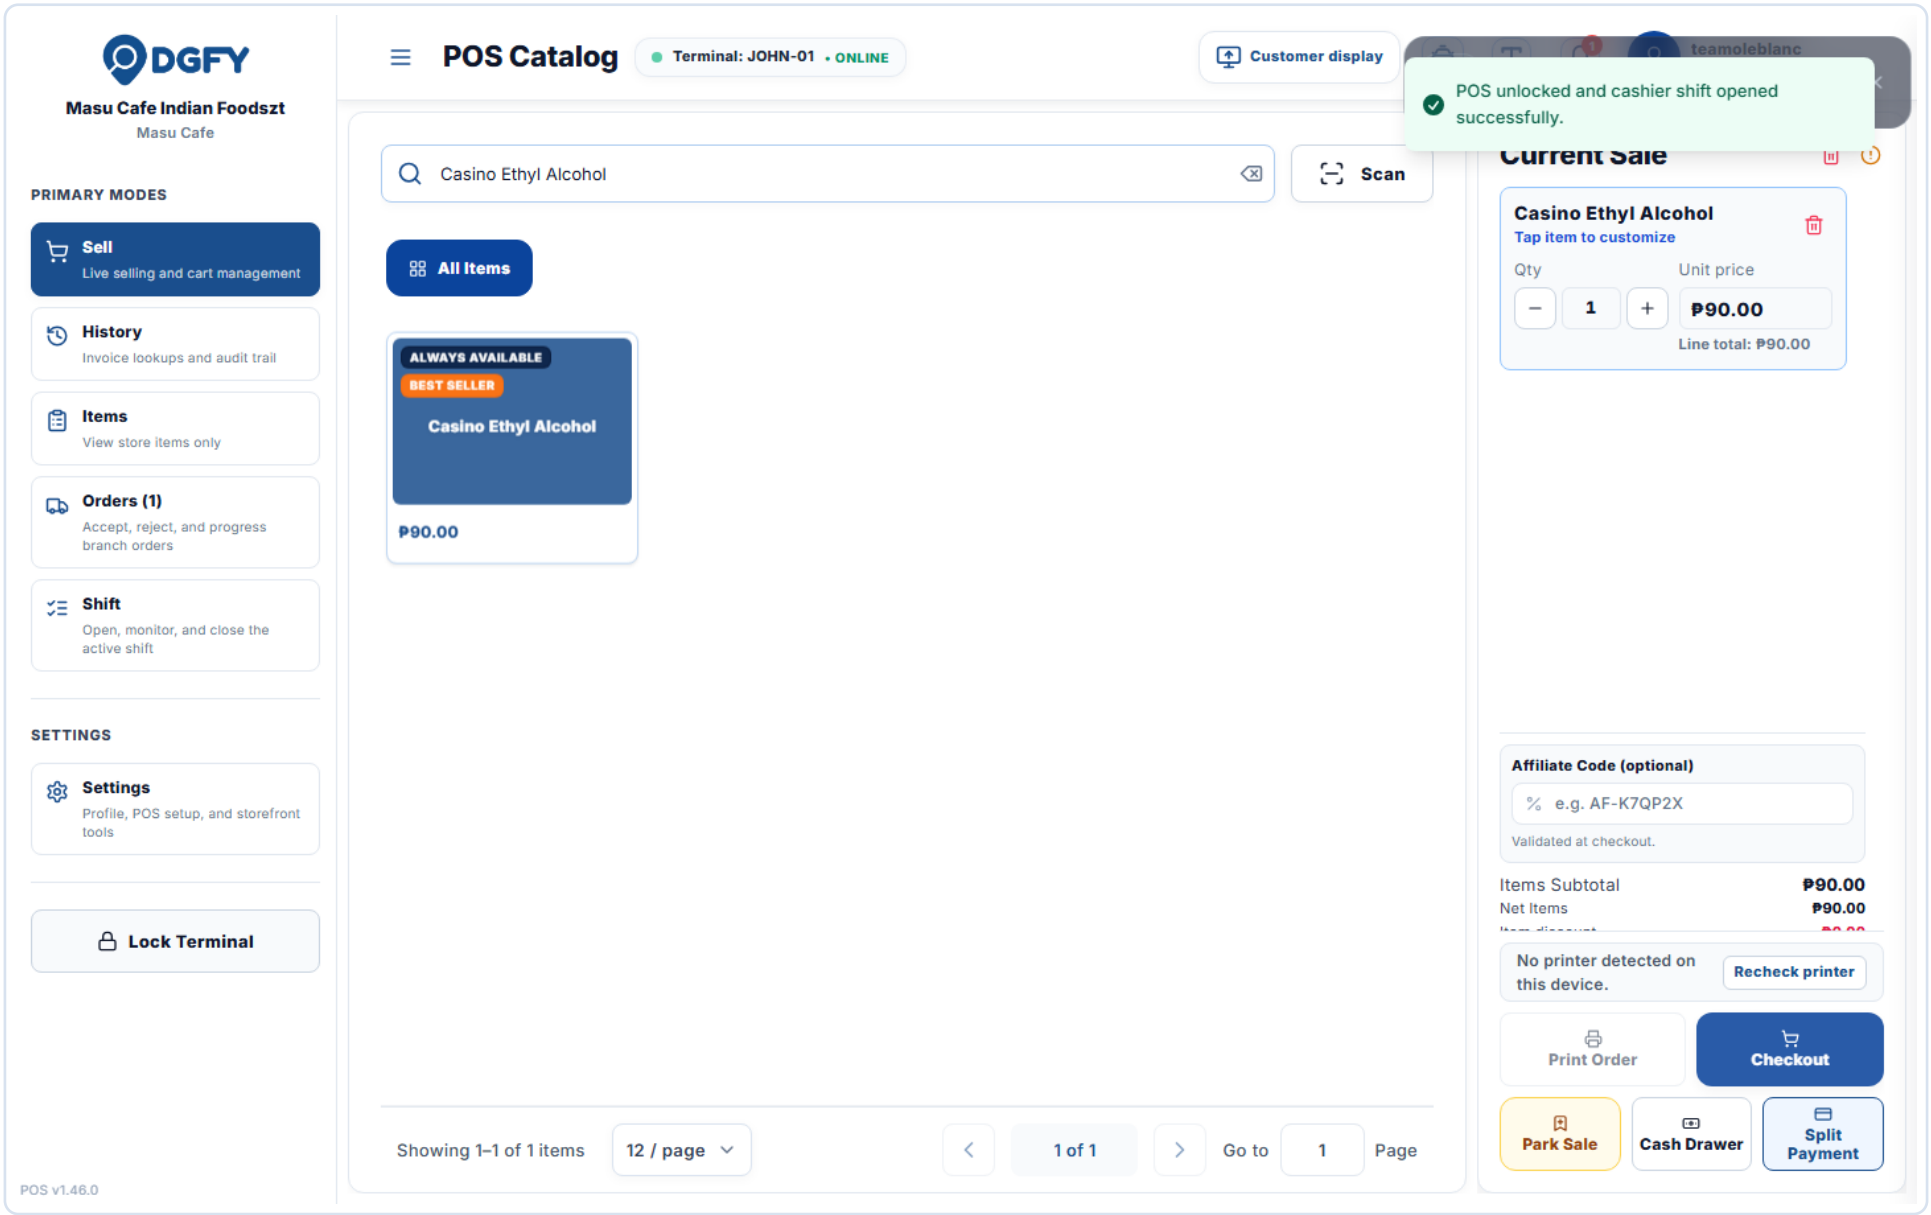

Step 11 - Parked-sale approval complete

The parked-sale request is removed from the pending queue after approval.

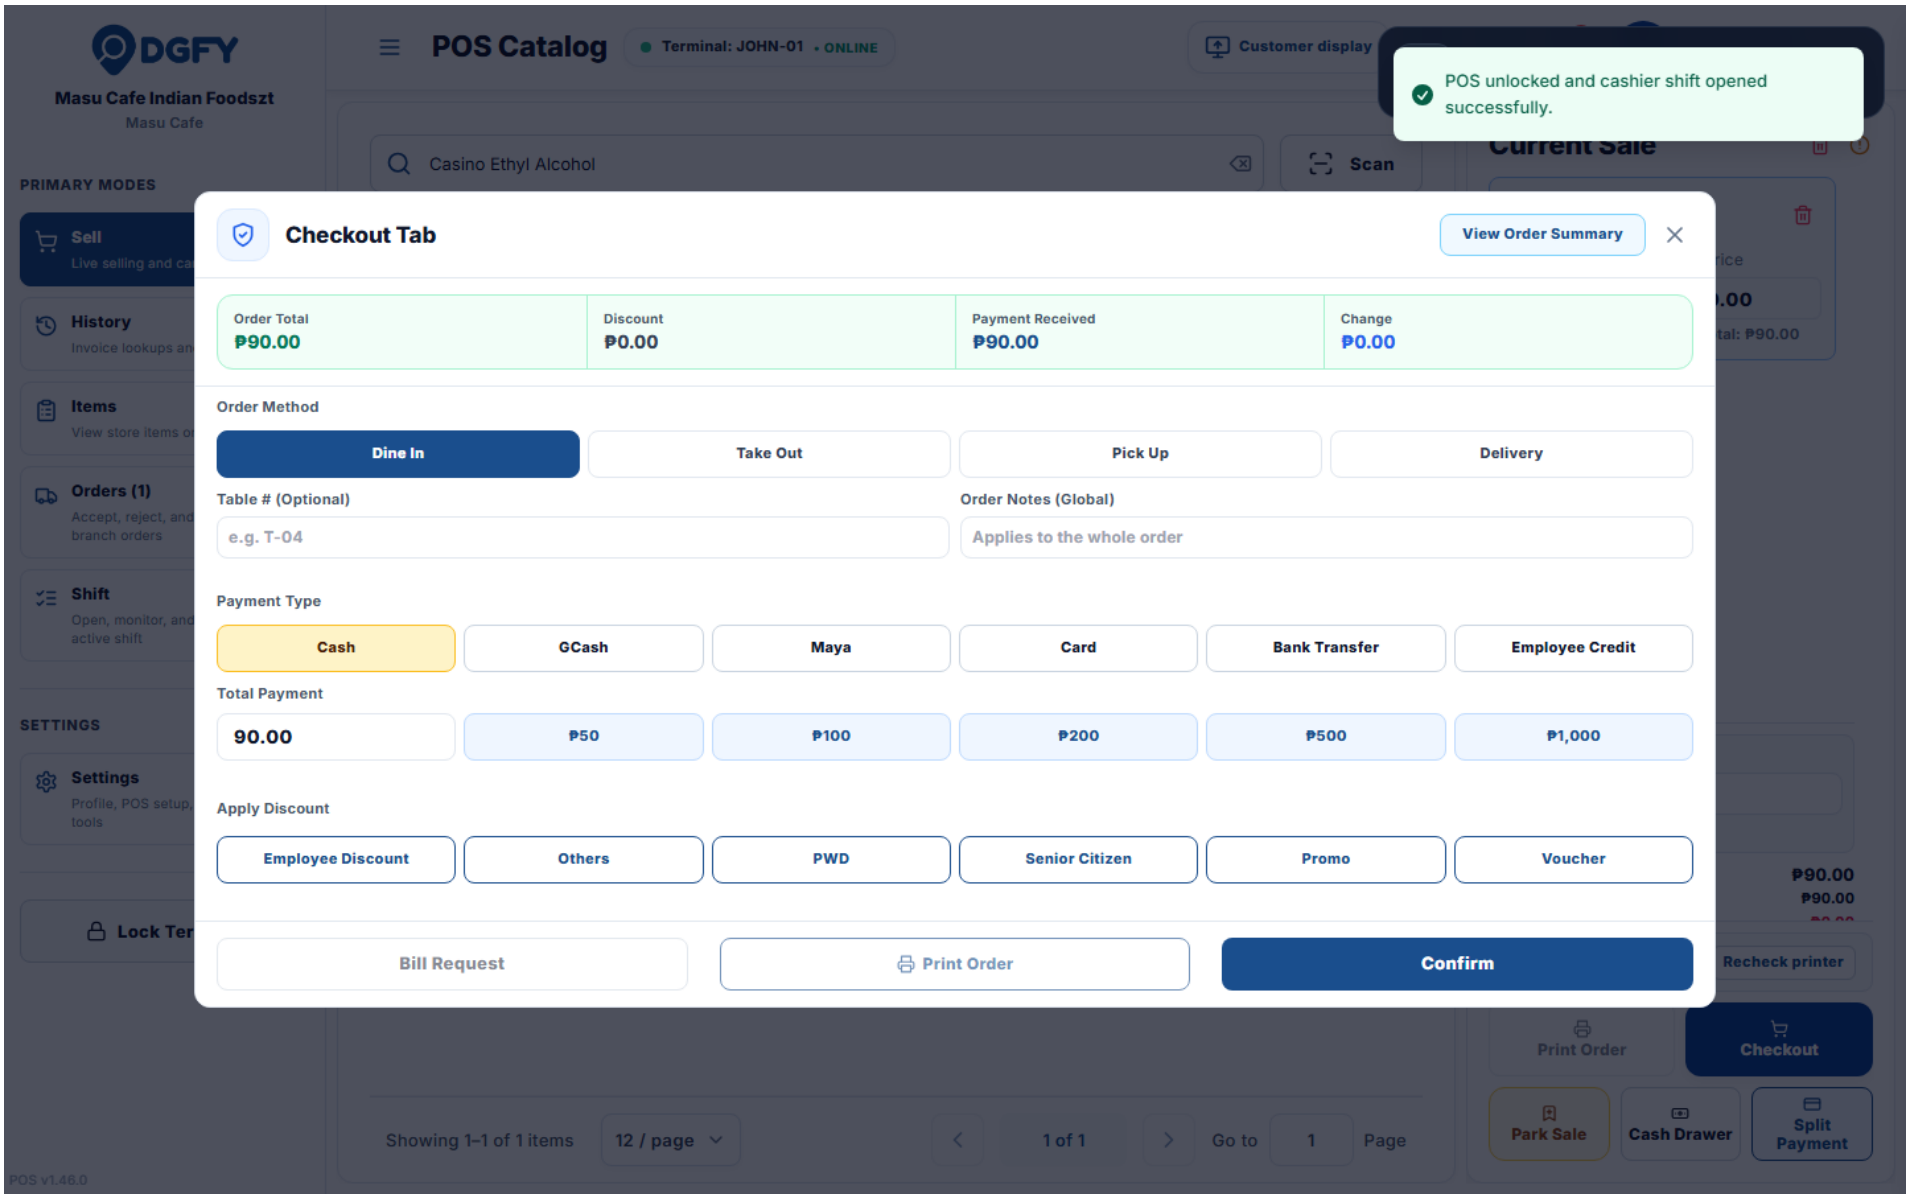

Step 12 - Create a sale for the void test

The cashier prepares the local sale that will be voided.

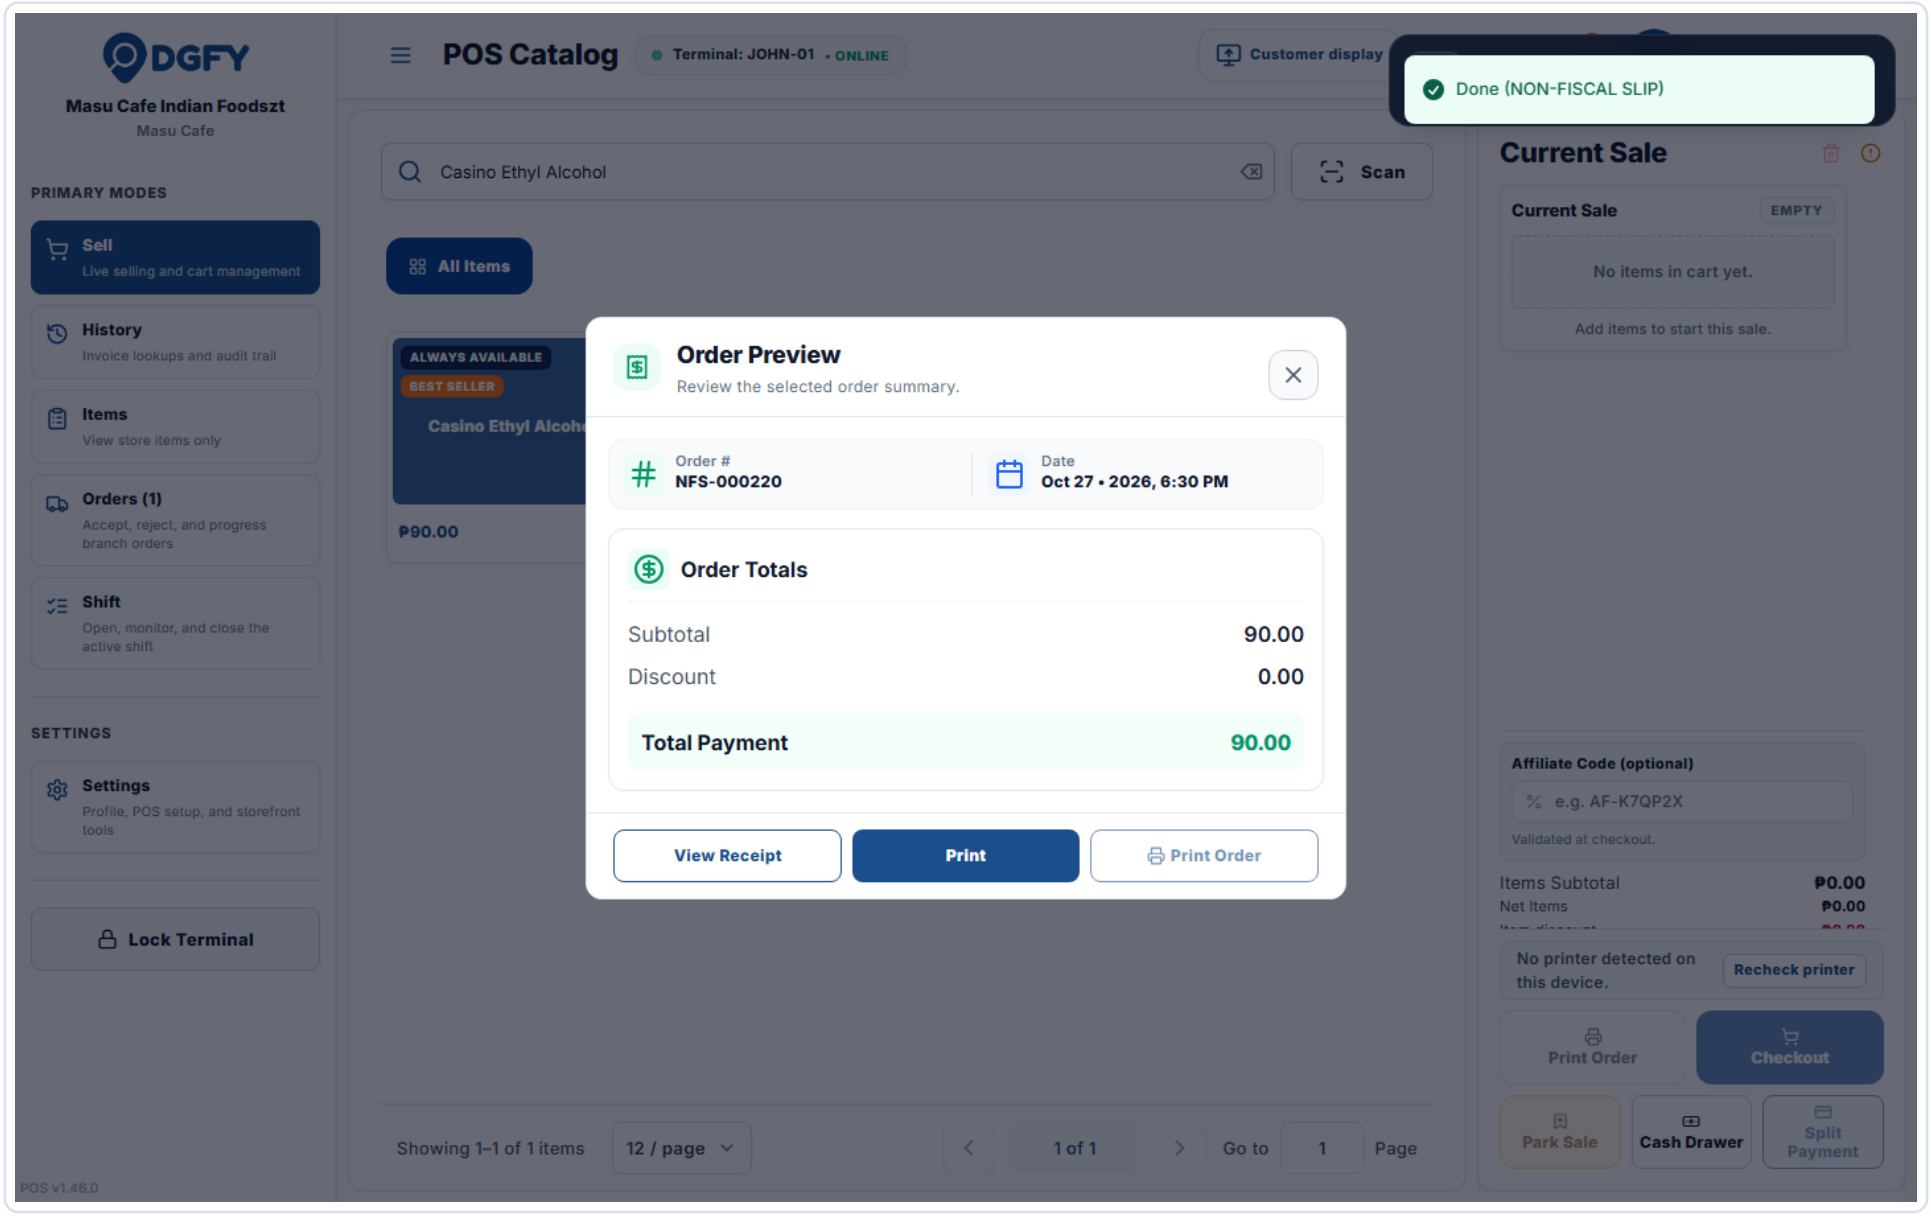

Step 13 - Checkout

The cashier opens checkout for the test sale.

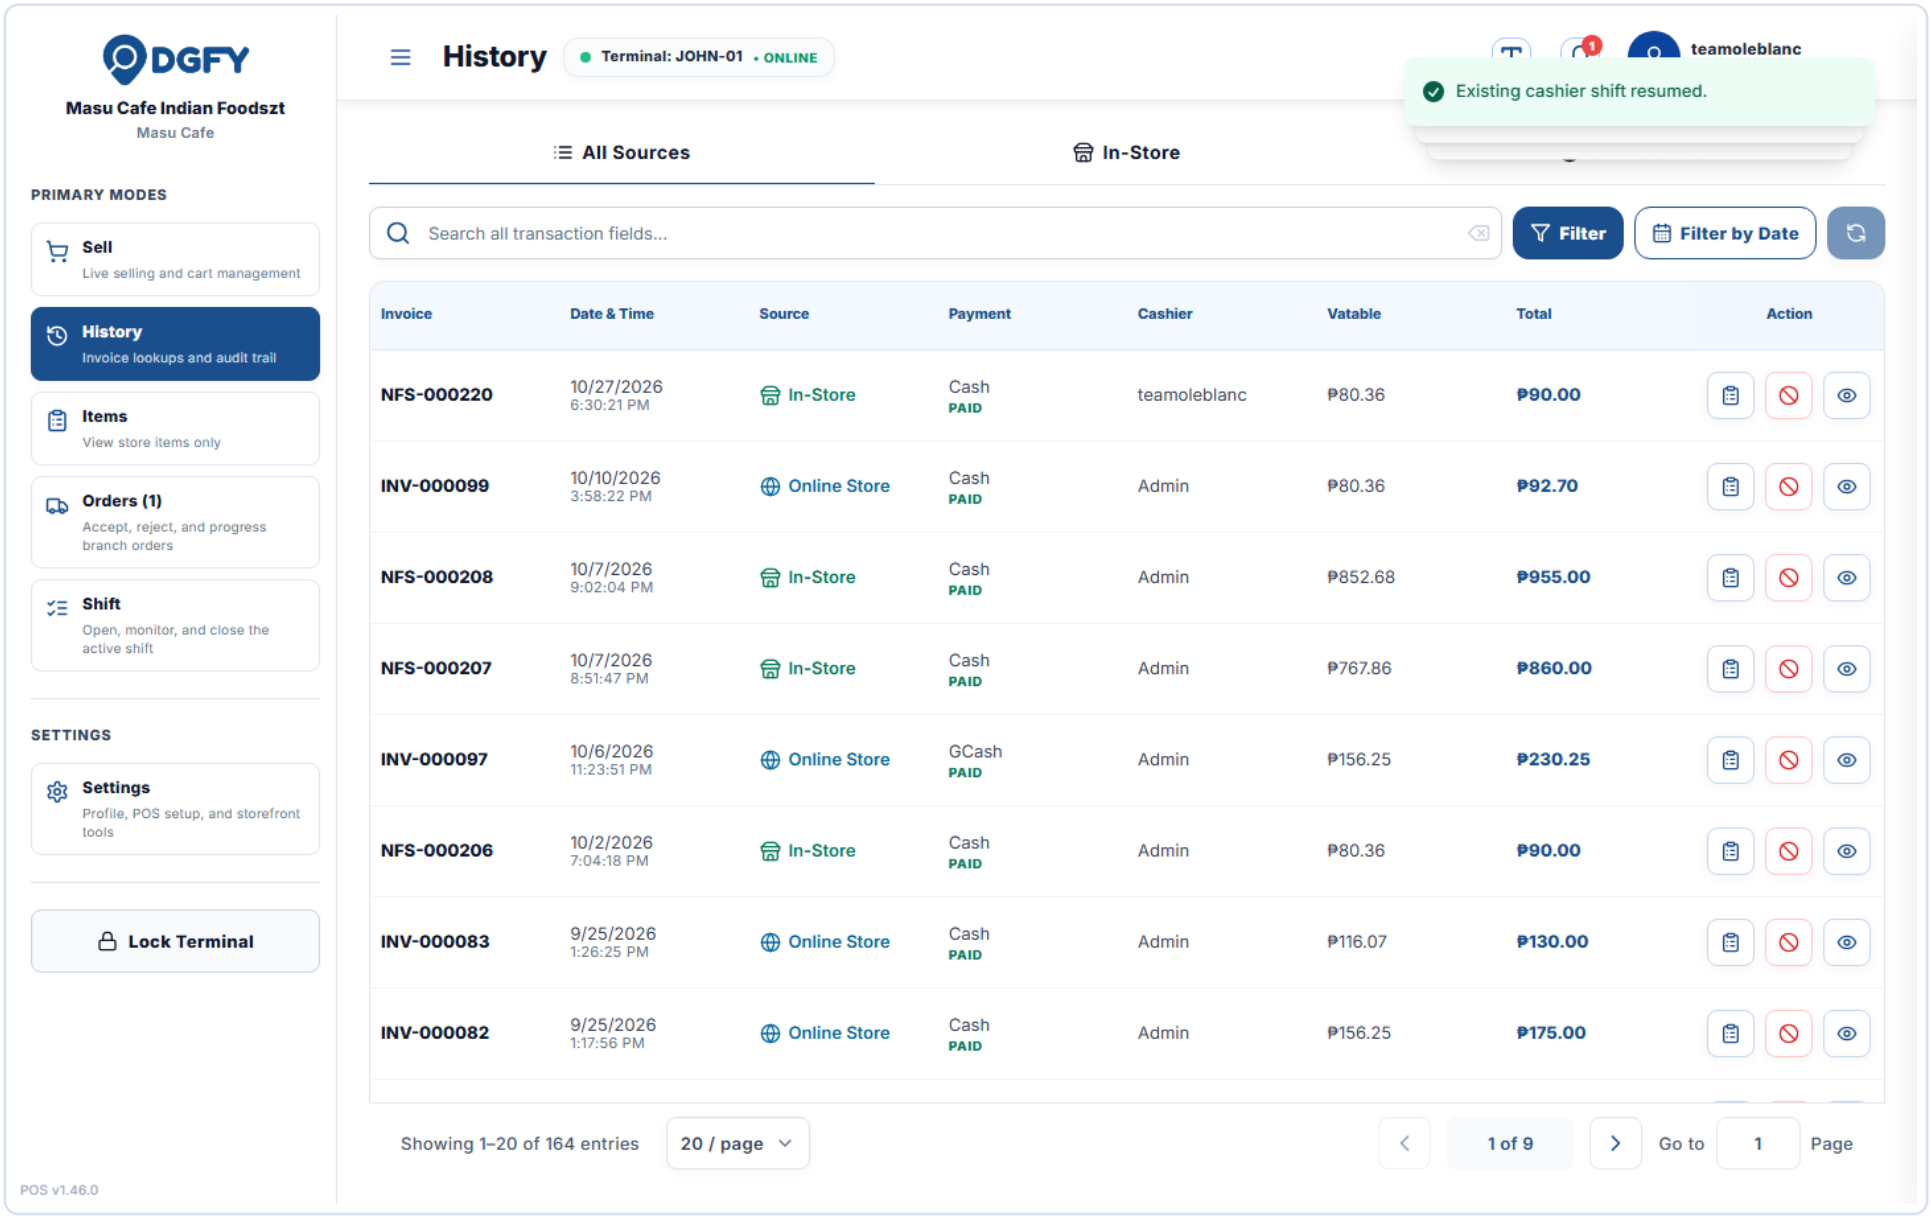

Step 14 - Sale receipt created

The sale is completed locally as invoice NFS-000220.

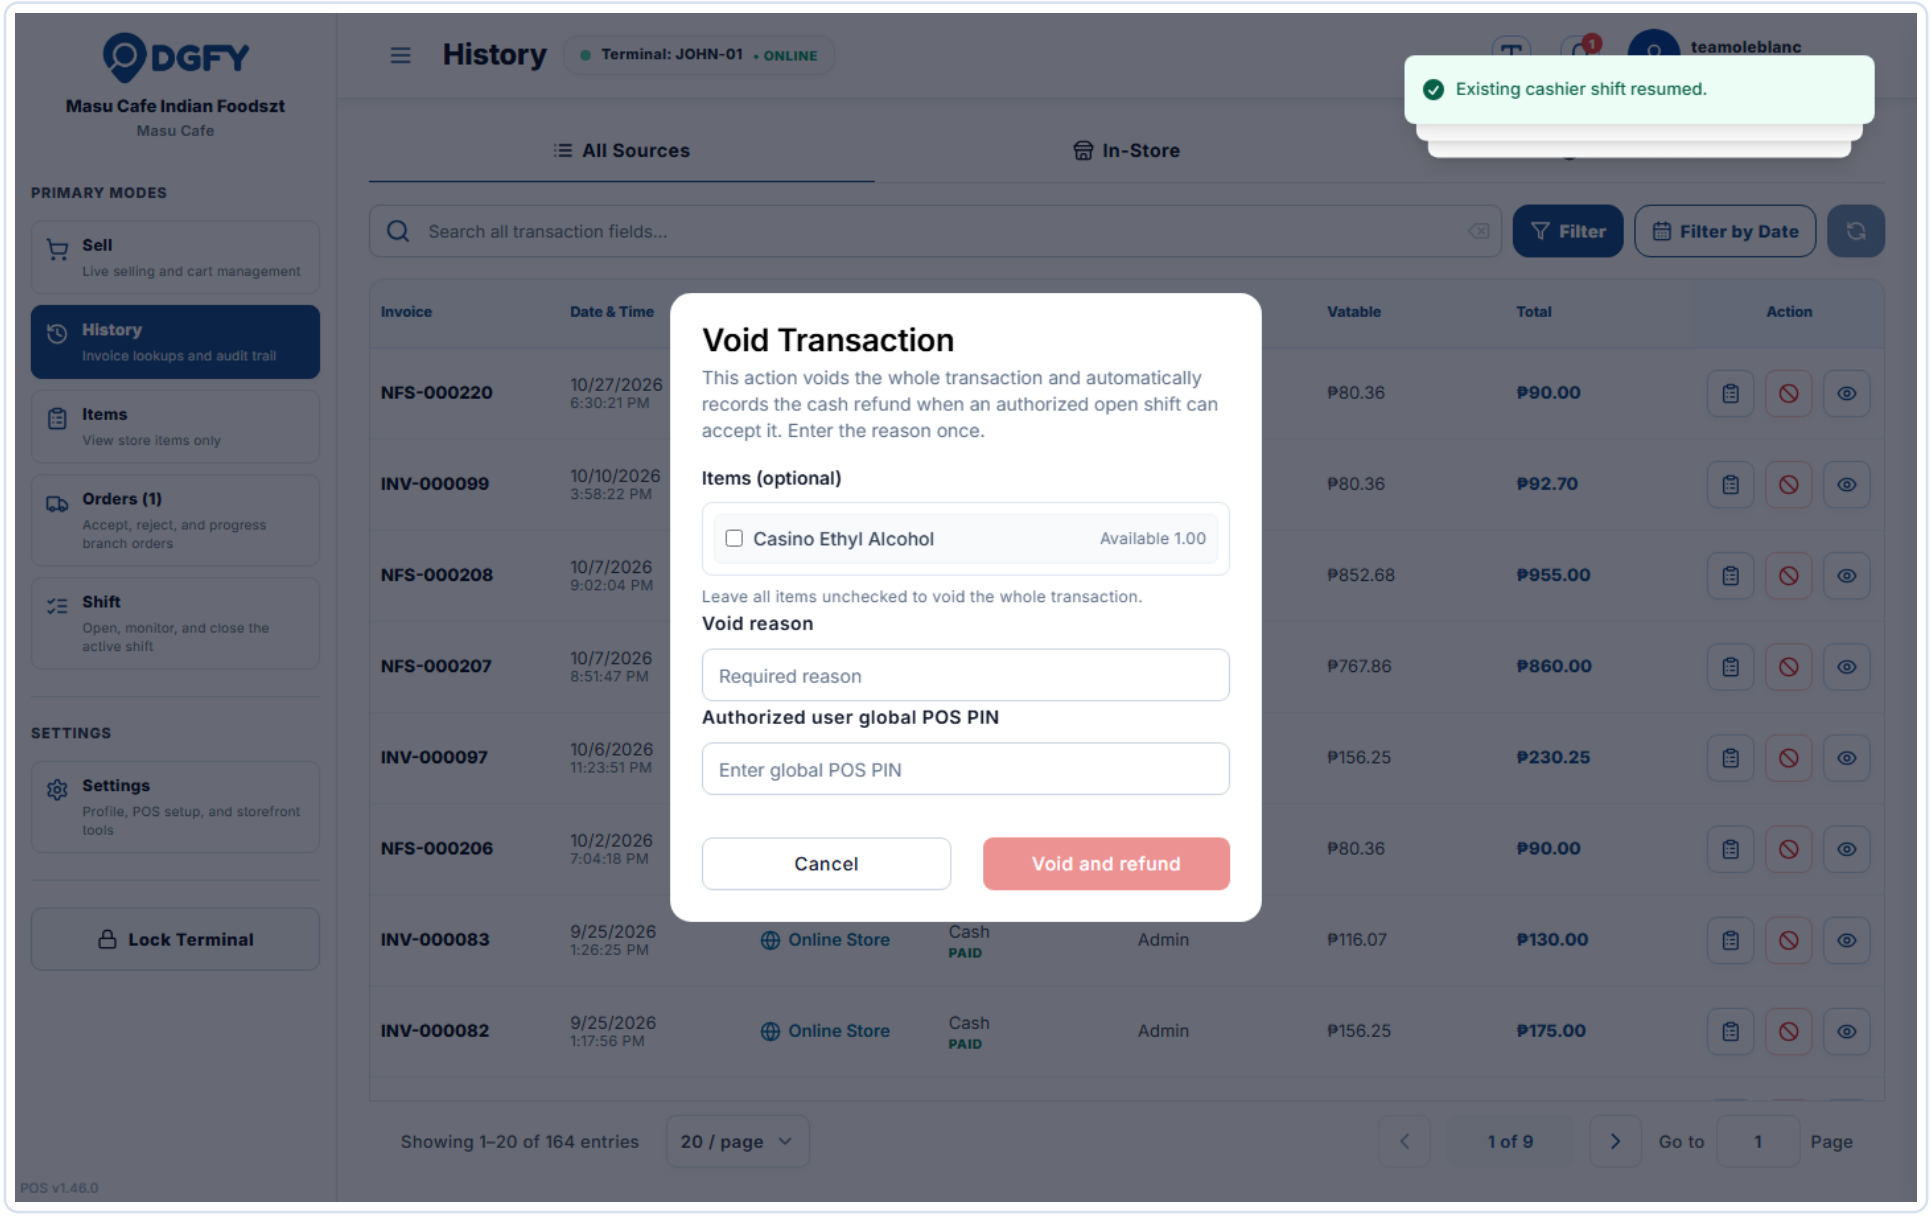

Step 15 - Find the completed sale

The cashier opens transaction history and locates the invoice.

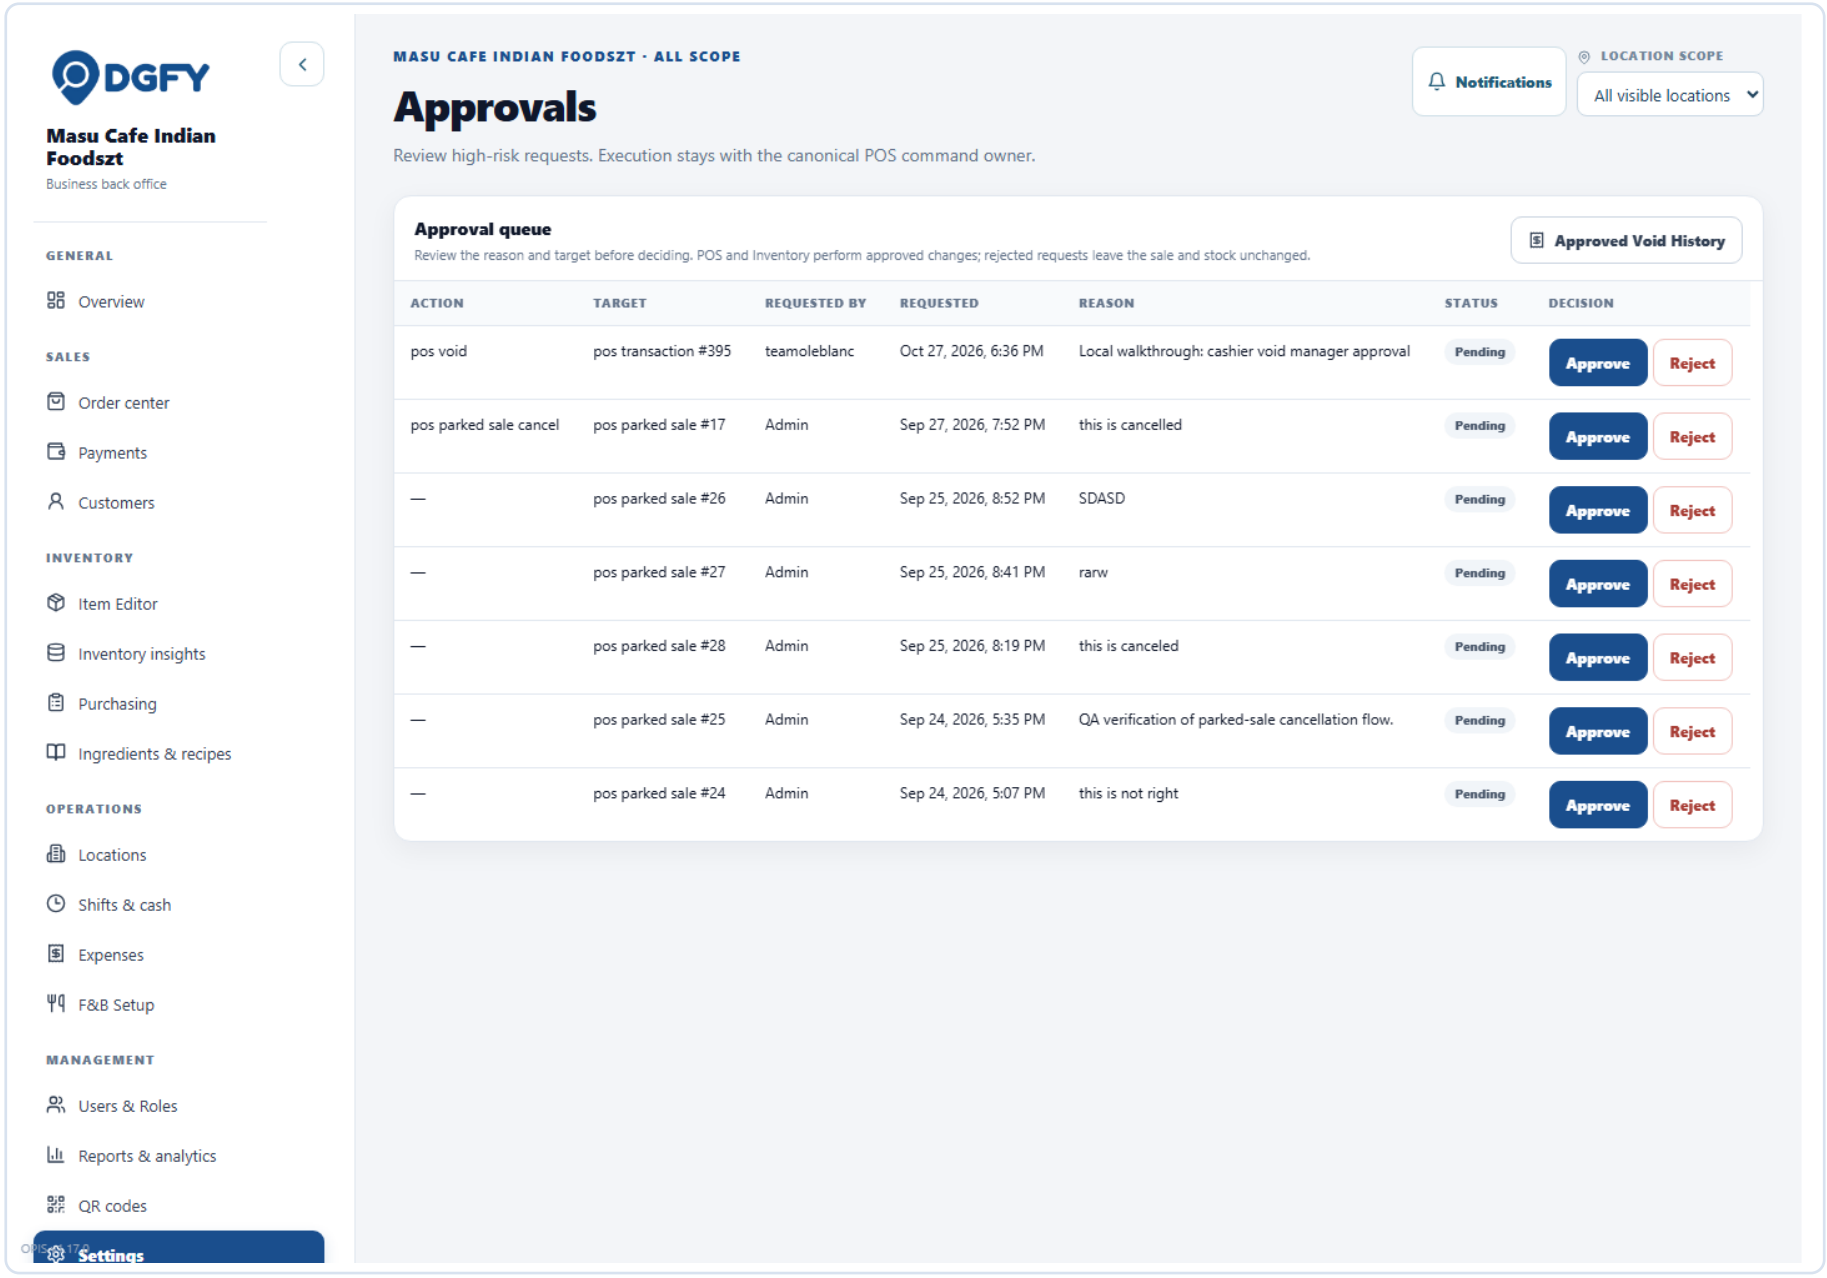

Step 16 - Void dialog

The cashier opens the void dialog. The visible UI requires a separate global POS PIN.

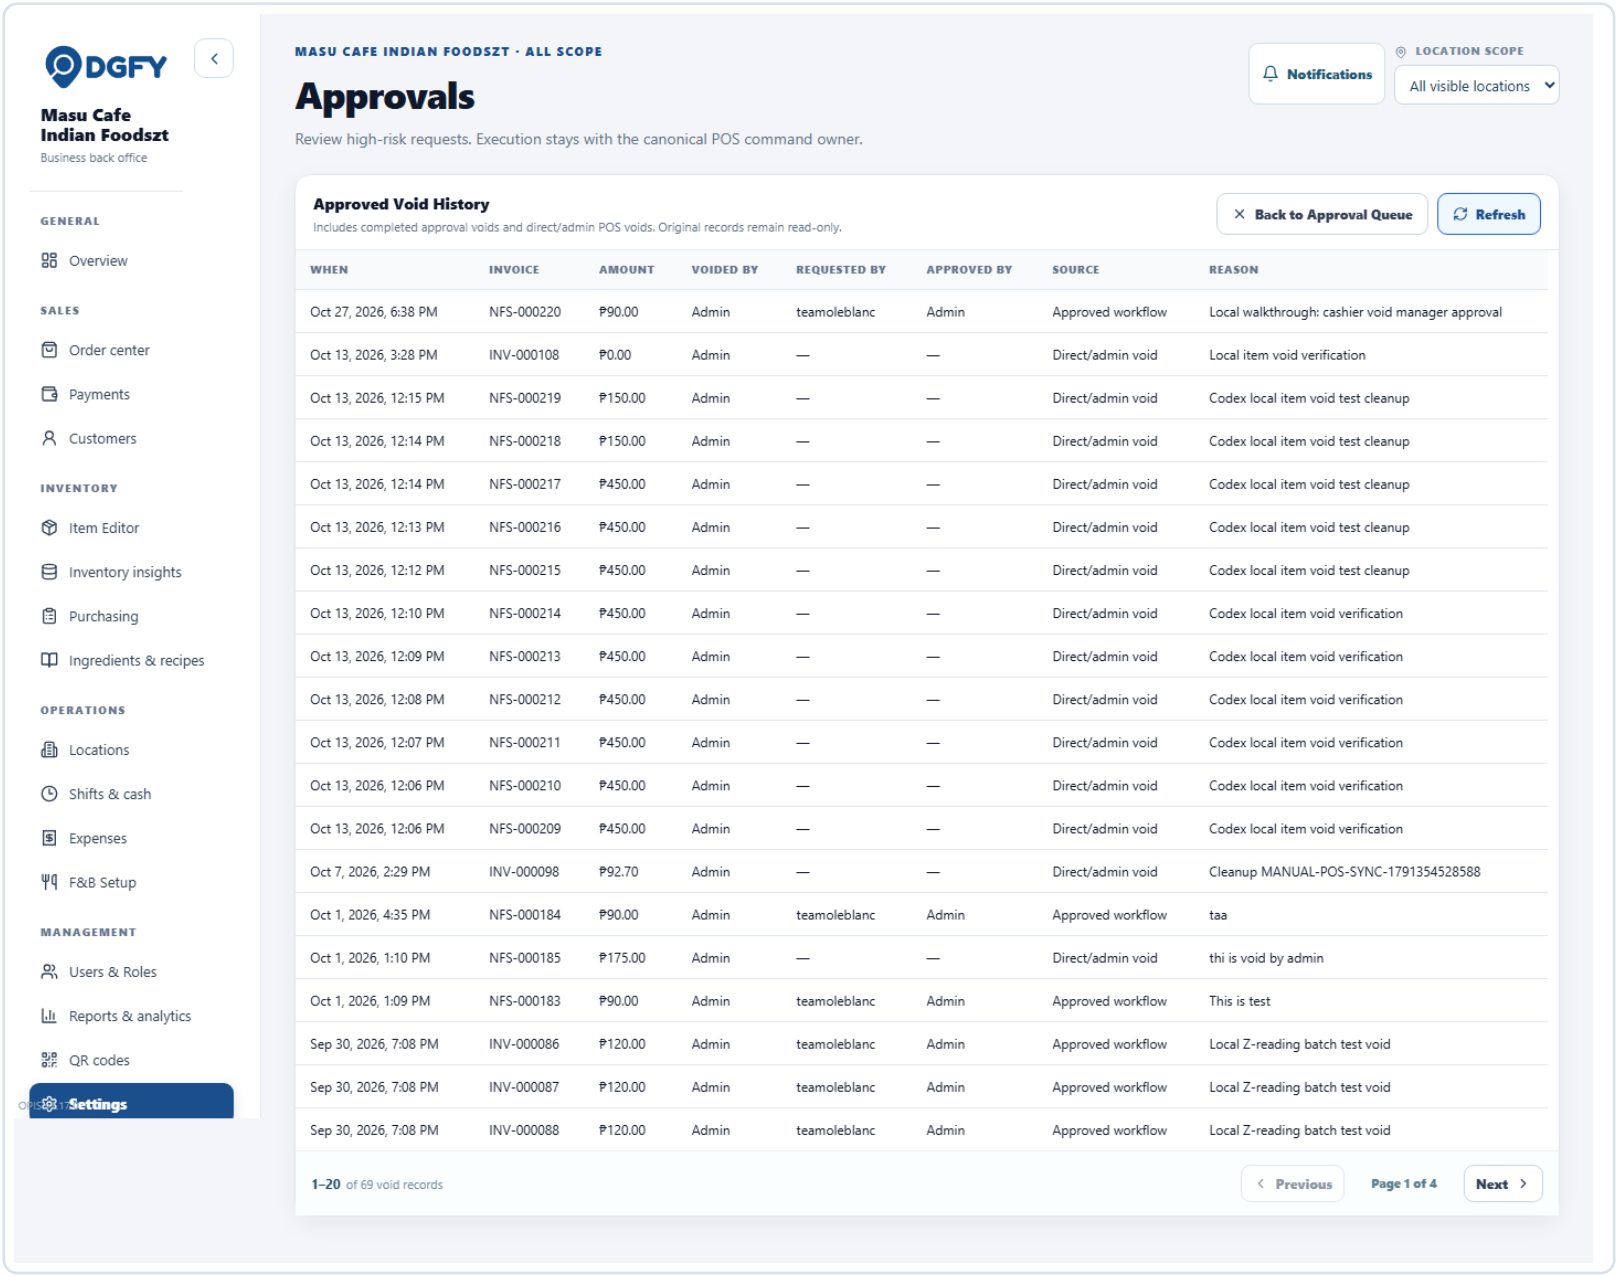

Step 17 - Admin void approval queue

The manager-approval request appears as POS transaction #395.

Step 18 - Final approved void history

OPIS records the approved workflow: NFS-000220, PHP 90.00, requested by teamoleblanc, approved by Admin.

Step 19 - Cashier ready after approval

The local cashier terminal is left ready for continued testing.
