DGFY Dine In Order Flow

A short guide for branch setup, customer checkout, POS preparation, and payment handling.

Core rule: Dine-in controls where and when the order is served. Payment policy controls how and when it is paid.

1 Activate Dine In

1. Open Settings, then Locations or Branches, and select the branch.
2. Turn on Supports Dine-in and Allow Scheduled Orders.
3. Choose whether Immediate Fulfillment is on. Turn it off for scheduled-only Dine-in.
4. Set branch hours, preparation or lead time, timezone, and order cutoff rules.
5. Under Payment Policies, configure Online Full, Online Downpayment, and Support In-Store Payment.
6. Save and publish. Confirm the branch shows Dine-in on the storefront.

2 Storefront Customer Flow

1. Open dgfy.ph, choose the business, then choose the exact branch.
2. Select items, quantities, and modifiers, then open the cart.
3. At checkout, choose Dine-in.
4. Choose Now or a future serve-by date and time within the branch rules.
5. Enter contact details and any order notes.
6. Choose an available payment option from the table below.
7. Review the branch, serve-by time, items, discounts, VAT, total, and balance, then place the order.
8. Show the customer the order PIN, serve-by time, payment status, and remaining balance.

Payment option	When available	Order result
Online full	Always, if enabled	Paid after provider success.
Online downpayment	If enabled	Partial payment; balance due at service.
Pay at store	Only when Support In-Store Payment is on	Unpaid until cashier records payment.

3 POS Cashier Flow

1. Sign in, open the terminal shift, and confirm the terminal is online.
2. Open Orders, then Dine-in Schedule.
3. Work from the queue sorted by serve-by time. Each order shows an H/M/S countdown and its payment status.
4. Use the modal reminders at 15, 5, 3, and 1 minute before service.
5. Open the order, verify the PIN, branch, items, notes, table, serve-by time, and balance.
6. Start preparation before the serve-by time and mark the order Ready to Serve when complete.
7. When the customer arrives, confirm or assign the table, collect any balance, record the actual payment method, and provide the receipt.
8. Mark the order Served or Completed only after service is finished.

4 Status Rules

- Fulfillment: Placed → Confirmed → Preparing → Ready to Serve → Served.
- Payment: Unpaid → Partially Paid → Paid. Payment can also be Pending, Failed, or Refunded.
- Do not mark an order paid just because it was placed. Pay-at-store orders remain unpaid until the cashier records payment.
- The storefront should normally not require a table number before arrival. The POS can assign or confirm the table.

5 Example

A customer selects Dine-in for 7:00 PM. The POS alerts the cashier at 6:45, 6:55, 6:57, and 6:59. The cashier prepares the order before 7:00, marks it Ready to Serve, collects any outstanding amount when the customer arrives, and marks it Served after handover.
